22 HOURS | 9 LESSONS | ENGLISH COMMUNICATION

Hi! I'm Mahmoud. I'm a trainee Mechatronics technician at Ezz Steel. I will help you learn English for your work.

English is important at work. It helps you talk to people who do not speak Arabic. It helps you understand instructions and conversations. It also helps you speak with confidence.

English is very important in Mechatronics. Many machine labels, warning signs, instructions, control panels, manuals, and technical words are in English. English helps you use machines safely and follow instructions correctly.

Good English can help you find more job opportunities in Egypt and in other countries. It can also help you learn new things about mechatronics and become a better technician.

If you want to be better ready for the job market, follow me through this book. We will learn English for real Mechatronics work situations, step by step.

WORKING SAFELY: INSTRUCTIONS, WARNINGS AND CLARIFICATION

EZZ STEEL APPLIED TECHNOLOGY SCHOOLS

Module 1

MODULE OVERVIEW

Safe communication is part of everyday work in a Mechatronics workshop. Before a technician checks equipment, enters a controlled area or begins a routine task, they need to understand short instructions, recognise safety messages, ask when something is unclear and record simple equipment conditions. In this module, you will practise the English used in pre-start briefings, workshop signs and labels, equipment checks and short safety exchanges. You will learn how to listen for key actions and details, clarify and confirm information, give direct warnings and complete a short pre-use inspection record.

MODULE LEARNING OUTCOMES

By the end of the module, you will be able to:

- Understand key actions, sequences, locations and safety conditions in short spoken workshop instructions and simple authentic signs, labels and checklists.
- Ask for repetition or clarification and accurately read back critical actions, numbers, letters and locations in routine mechatronics workplace exchanges.
- Give short, direct, situation-specific safety warnings and state the required safe action or PPE in routine workshop situations.
- Complete a short pre-use inspection record using clear condition words, pass/fail decisions and brief action-required comments.

Module Evidence

Module Overview

#	Lesson	Skill focus	Workplace communication	Language builder	Time
1	Before You Touch It: Follow the Safety Briefing	Listening	Understand a pre-start safety briefing	Imperatives; sequence markers	**2.5 h**
2	Check It Back: Confirm Before You Start	Speaking	Clarify and read back instructions	Clarification questions	**2.5 h**
3	Read the Risk: Signs, Labels and Safe-Use Messages	Reading	Read workshop signs and labels	must / must not; do not	**2 h**
4	Speak Up for Safety: Warn a Colleague	Speaking	Give an immediate hazard warning	must / must not; imperatives	**2.5 h**
5	Get the Details Right: Listen for Critical Equipment Information	Listening	Hear numbers, codes, units and locations	Number and code patterns	**2.5 h**
6	Say It Back, Check It Twice: Clarify Critical Details	Speaking	Repeat, clarify, and confirm details	Clarification/ confirmation	**2.5 h**
7	Check Before Use: Read a Technician's Inspection Checklist	Reading	Read condition and status fields	be + condition adjective	**2 h**
8	Record It Clearly: Write the Pre-Use Safety Check	Writing	Complete a short inspection record	there is/are; have/ has	**2.5 h**
9	Ready for the Workshop? The Safety Communication Challenge	Revision	Combine listening, reading, speaking and writing	Revision	**3 h**

LESSON 1

BEFORE YOU TOUCH IT: Follow the Safety Briefing

Skill focus: Listening

1 Introduction to the lesson

Before you enter a workshop area or begin an inspection, a supervisor may give a short safety briefing. You need to hear the action, the order, where to work, the PPE to wear, and the condition that means you must stop and report. In this lesson, you will listen to a realistic pre-inspection briefing and practise finding the information that matters before work begins.

2 Communication Goals (ILOs)

By the end of the lesson, you will be able to:

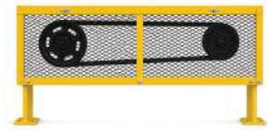

- identify the key action and the order of steps in a short workshop safety briefing.
- identify a location, PPE requirement, prohibited action and stop/report condition.
- notice how sequence markers, imperatives and 'do not' make instructions clear.
- hear stressed action words and clear final consonants in key command words.

MAIN COMMUNICATION OUTCOME

Identify the key action, sequence, location, PPE requirement, and stop/report conditions in a short spoken workshop safety briefing.

3 Start-Up Check

You are about to start work. Your supervisor gives you four safety instructions. Work in pairs. Look at photos A–D and match each one with the correct instruction (1–4).

A. Safety glasses B. Emergency stop C. Main isolator D. Machine guard

1. Check that the protective barrier is in place. .....

2. Check the stopping device before use. .....

3. Keep the machine power isolated during the inspection. .....

4. Wear the required eye protection. .....

4 Pre-listening vocabulary and pronunciation

4.1 LOOK AND LEARN - Workshop

The table below shows some safety words and chunks you will need when inspecting a workplace. Read each word or chunk and its meaning. Then, work with a partner. Take turns pointing to a photo and saying the correct word or chunk. Finally, read the example for each photo.

Word/chunk	Meaning	Visual cue	Example
Safety glasses	PPE that protects the eyes		Wear your safety glasses.
Machine guard	A protective barrier around a dangerous part		Check that the guard is in place.
Emergency stop	A control used to stop a machine quickly		Check the red emergency stop.
Isolator switch	A switch used to disconnect power		The isolator switch is OFF.

Restricted area	A place you must not enter without permission		Do not enter the restricted area.
Yellow inspection line	A marked boundary for the inspection area		Stay inside the yellow line.
Control panel	A part of a machine with buttons, switches, and displays used to control it		The checklist is at the control panel.
Pre-start checklist	A short check form used before work begins		Record the results on the checklist.

4.2 ACTION WORDS YOU WILL HEAR

The words in the table below are called action words. You will hear them when inspecting a workplace and preparing to carry out a safe inspection. It is important to understand what they mean. Work with a partner. Read each word, its meaning, and the example. Then, take turns covering the meanings and testing each other. Can you remember the meaning of each word?

Action word	Meaning	Example
Inspect	Look closely to check something	Inspect the guard.
Check	Look or test to make sure something is ok	Check the walkway.
Switch off	Turn the power off	Switch off the machine.
Isolate	Separate equipment from its energy source	The machine is isolated.
Touch	Put your hand on something	Do not touch the guard.
Start	Make the machine begin to operate	Do not start the machine.
Stop	End an action or check	Stop the check.
Record	Write information on a form or log	Record the result.
Report	Tell the responsible person about a problem	Stop and report the problem.

KNOWLEDGE CHECK

Which word means "inform the person in charge when you notice a problem"?

a. Inspect

b. Report

c. Touch

SOUND CHECK- Pronunciation

NOTICE IT

Safety instructions often stress the action word because it tells the listener what to do. The last sound also matters.

Listen: CHECK /k/, TEST /t/, START /t/, STOP /p/.

Say the final sound clearly.

A. Listen to your teacher and repeat. Tap once on the strong action word.

- CHECK the guard.
- TEST the emergency stop.
- START only with permission.
- STOP and report.

B. PAIR WORK: Listen to your teacher reading five safety instructions. Write the action word you hear in the table below, then choose its final sound from the following: /k/ /p/ /d/ /s/ /t/

Action word	Final sound
1.	.....
2.	.....
3.	.....
4.	.....
5.	.....

5 Before you Listen

WORKPLACE SCENARIO

It is 8:00 a.m. in Mechatronics workshop Bay 1. A trainee is ready to inspect a training machine. The supervisor gives a short safety briefing before the trainee enters the marked inspection area.

PAIR WORK: Read the questions below. Try to guess the answer to each question. Don't worry if you are not sure.

1. Who will speak most?

☐ The trainee

☐ The supervisor

☐ A visitor

2. What is the main purpose?

☐ Buy equipment

☐ Prepare for a safe inspection

☐ Repair a motor

3. Tick four things you expect to hear:

☐ PPE

☐ location

☐ lunchtime

☐ order of checks

☐ stop/report condition

GROUP SHARE: Join another pair and compare your guesses. Discuss your answers and be ready to share them with the class.

6 Listening

Audio 1.1 LISTENING | pre-inspection safety briefing

LISTENING PURPOSE

You will listen to a pre-inspection safety briefing.

First listening: listen for the main purpose. Think: What is the briefing about?

Second listening: listen for actions, order, location, PPE, and the stop/report condition.

After listening, answer the questions below.

FIRST LISTENING - Choose the best answer:

What is the briefing mainly about?

a. Repairing a machine **b.** Giving task instructions **c.** Operating equipment

SECOND LISTENING - Put the actions in the correct order (1-5).

☐ Inspect the machine guard

☐ Record the result on the checklist

☐ Put on safety glasses

☐ Check the emergency stop

☐ Check the walkway

LISTEN AGAIN

Look at each item in the first column and write the information you hear about it in the second column.

Information	Your answer
PPE	
Permitted area	
Restricted area	
One prohibited action	
Where to record the result	
One stop/report condition	

TRUE OR FALSE? Listen once more if needed.

1. The machine is switched on during the inspection. True ☐ False ☐
2. The trainee may enter the robot cell. True ☐ False ☐
3. The walkway is checked before the guard. True ☐ False ☐
4. A damaged emergency stop is a stop-and-report condition. True ☐ False ☐

PAIR CHECK: Compare your answers. If one answer is different, point to the question and say, "I heard ......"

7 LANGUAGE IN CONTEXT - What did you hear?

These short chunks come from the listening. Match each chunk with its job.

Chunk	Job	Answer
1. First... Next... Then... Finally...	a. says what to do when there is a problem	.....
2. Check the walkway.	b. says an action must not happen	.....
3. Do not enter.	c. gives a direct action	.....
4. Inside the yellow line	d. shows the order of actions	.....
5. Stop and report	e. shows where the trainee may work	.....

7.1 MEANING CHECK - Action words from the listening

In pairs, match each word from 1-4 with its meaning from a-d.

Word	Answer	Meaning
1. inspect	.....	a. write information on a form
2. isolate	.....	b. tell the supervisor about a problem
3. record	.....	c. separate equipment from its energy source
4. report	.....	d. look closely to check something

8 Think It Through

1. Why is "Stay inside the yellow line" clearer than "Stay over there"?

.....

2. Which information must you remember exactly: the PPE, the location, the order, or the stop/ report condition? Choose two and mention the reason.

.....

3. What should you do if you do not hear one instruction clearly?

.....

4. Which words tell you that an action is not allowed/ prohibited?

.....

GROUP WORK: Compare your answers. Your group chooses one safety message that must be very clear and explains why in one short sentence.

9 DID YOU KNOW?

On many machines, emergency-stop controls are placed where workers can reach them quickly. HSE guidance also says machine controls should be clearly marked. Clear location and clear labels help technicians find the correct control quickly when something goes wrong.

Source: UK Health and Safety Executive (HSE), Using work equipment safely, INDG291(rev1), guidance on machine controls.

10 Build the Message - Language Focus

10.1 PUT ACTIONS IN ORDER - First, Next, Then, Finally

NOTICE IT

Sequence markers tell the listener when each action happens. Put the marker at the beginning of the instruction: First, check the walkway.

Technicians do many jobs step by step. Sequence words help them explain the correct order and work safely.

PAIR WORK: Put the four actions in a clear order. Add First / Next / Then / Finally.

☐ inspect the guard.
☐ put on safety glasses.
☐ record the result.
☐ check the walkway.

KNOWLEDGE CHECK

Which sentence clearly shows the last action?

a. Finally, record the result. b. Record finally the result. c. Finally, record results.

10.2 GIVE A DIRECT ACTION - base verb

NOTICE IT

Safety instructions often start with the base verb.

We do not usually say 'you' in direct instructions:

Start only with permission.

PAIR WORK: Choose the correct verb form.

1. ..... the walkway. (Checks / Check)
2. ..... inside the yellow line. (Stay / Stays)
3. ..... the result. (Records / Record)

KNOWLEDGE CHECK

Which is the correct direct instruction?

a. Checks the guard. b. Check the guard. c. You checking the guard.

10.3 SAY WHAT MUST NOT HAPPEN - Do not + base verb

NOTICE IT

Use Do not + base verb for a prohibited action:

Do not remove the safety cover.

Do not cross the warning line.

Do not operate damaged equipment.

IMPORTANT: Do not use 'to' after do not.

GROUP WORK: Change each unsafe action into a prohibition. One student writes; the others check.

1. Enter the robot cell. →. .....

2. Touch the guard. → .....

3. Start the machine. → .....

KNOWLEDGE CHECK

Which sentence is correct?

a. Do not to touch the guard. b. Do not touch the guard. c. Not touch the guard.

10.4 SAY WHERE - inside / on the left / at

NOTICE IT

Location phrases make instructions more specific. The listener should know exactly where the action happens.

- The emergency button is **on the left of the door.**
- Keep the tools **inside the marked area.**
- Meet the supervisor **at the workshop entrance.**

Technicians must know exactly where to do each action. Unclear instructions can cause mistakes and safety problems.

"Put the tools there": tools may be left near moving machinery or block a walkway.

PAIR WORK: Complete with at, on the left, or inside.

1. Stay ..... the yellow line.

2. The robot cell is .....

3. Record the result ..... the control panel.

KNOWLEDGE CHECK

Which sentence gives a clear location?

a. Stay over there. b. Stay inside the yellow line. c. Stay somewhere.

11 Your Shift Challenge

CHALLENGE: BRIEF IT BACK

You have listened to the supervisor's pre-inspection briefing. Use your completed briefing card to give the key message to another trainee. Do not add new technical information.

Skill	Speaking - short guided safety briefing
Student role	You are a trainee technician who has just received the briefing
Audience	Another trainee who missed the briefing
Purpose	Pass on the key safety message in the correct order
Information to include	PPE; permitted area; four ordered checks; one prohibition; one stop/report condition
Output conditions	2 minutes to prepare. Speak for 30-45 seconds. Use keyword notes only
Success evidence	The sequence is clear, and no safety-critical action, location, or stop/report condition is changed

PAIR WORK - How to do the challenge

1. Student A gives the short briefing.
2. Student B listens and ticks the six required points.
3. Student B asks only one question if a detail is unclear.
4. Change roles with a new order card from the teacher.

For Student B Use:

Did the speaker include?	Yes	Not yet
PPE	☐	☐
Permitted area	☐	☐
Ordered checks	☐	☐
Prohibition	☐	☐
Stop/report condition	☐	☐
Correct sequence / no changed safety information	☐	☐

Your Communication Toolkit

Communicative move	Useful chunks/sentence frames
Open	Before the inspection, listen to these steps.
Sequence	First,... Next,... Then,... After that,... Finally,...
Direct action	Check the... / Stay inside... / Record the...
Prohibition	Do not enter... / Do not touch... / Do not start.
Location	Inside the yellow line / On the left / At the control panel
Stop/report	If you see..., stop and report it.

12 Now I Can!

☐ I can identify the main purpose of a short workshop safety briefing.

☐ I can follow the order of safety actions in a briefing.

☐ I can identify a location, PPE requirement, and prohibited action.

☐ I can identify the condition that means I must stop and report.

☐ I can use first, next, then, and finally to reconstruct a short safety sequence.

13 Look Back, Level Up

1. Which detail was easiest to hear: the action, the location, or the PPE?

2. Which action word was hardest to hear clearly?

3. What will you do if one safety instruction is unclear before you start work?

14 Before You Clock Out

STUDENT PROMPT

Listen once to your teacher's four-step safety message. Number the four actions 1-4 and write one stop/report condition.

Actions: ___ check the walkway ___ record the result ___ inspect the guard ___ wear safety glasses

Stop/report condition: .....

15 Job-Site Word Bank

English word/ chunk	English meaning	Arabic equivalent	See It on the Job
Inspect	Look closely to check something	يفحص / يعاين	Inspect the guard.
Restricted area	An area you must not enter	منطقة محظورة	The robot cell is a restricted area.
Safety glasses	Eye-protection PPE	نظارات السلامة	Wear your safety glasses.
Guard	A protective barrier around a dangerous part	واقي / حاجز وقائي	Check the machine guard.
Emergency stop	A control used to stop a machine quickly	زر التوقف الطارئ	Check the emergency stop.
Isolator switch	A switch used to disconnect power	مفتاح عزل / فصل الطاقة	The isolator switch is OFF.
Walkway	A marked path for people to walk	ممر للمشاة	Check the walkway.
Record	Write information on a form or log	يسجل	Record the result.
Report	Tell the responsible person about a problem	يُبلّغ المسؤول	Stop and report the problem.
Pre-start checklist	A short check form used before work begins	قائمة فحص قبل التشغيل	Complete the pre-start checklist.

2 LESSON

CHECK IT BACK: CONFIRM BEFORE YOU START

Skill focus: Speaking

Before a task begins, a technician must make sure the message is clear. In this lesson, you will listen to a short supervisor-trainee exchange, ask simple questions when one detail is unclear, and say the instruction back in the correct order. You will practise the English needed to check the machine, area, PPE, code and reporting route before work starts.

1 Introduction to the lesson

You are a trainee technician. A supervisor gives you instructions before a workshop inspection. One code is hard to hear, and you are not sure where to record the result. Guessing is not safe. You need short English questions to check the details, then you need to say the message back clearly before you start.

MAIN COMMUNICATION OUTCOME

Use simple read-back and clarification phrases to confirm an action or sequence and clarify one uncertain safety detail before work begins.

2 Communication Goals (ILOs)

By the end of the lesson, you will be able to:

- ask a short clarification question about an action, code, location, PPE, or reporting detail.
- read back a short workshop instruction in the correct order.
- notice which question checks a detail, and which phrase closes the communication loop.
- use rising intonation for clarification and falling intonation for confirmation; stress the critical word or number.

3 Start-Up Check

PAIR WORK - CLEAR OR UNCLEAR?

Work with a partner. Read the four sets of messages below. Circle the clearer message: A or B. Then, tell your partner which exact word, code, or location makes it clearer.

	A	B
1	Turn it off there.	Switch off isolator B-14 beside Panel B.
2	Do you mean this machine?	Machine?
3	Where should I record the result?	Record where?
4	OK.	Confirmed: first I stop CV-02, then I switch off B-14

KNOWLEDGE CHECK

Which message is safest? Why?

a. Stay over there.

b. Stay inside the yellow work area.

c. Stay near it.

4 Pre-listening vocabulary and pronunciation

4.1 LOOK AND LEARN - Things and places you can see

Look at each photo. Read the word and meaning. Work with a partner: Student A points to a photo. Student B says the word. Change roles.

Word/chunk	Meaning	Visual cue	Example
Work area	the part of the workshop where you are allowed to work		Stay inside the work area.
Equipment	machines and tools used for work		Do not touch the equipment yet.
Control panel	a panel with switches, buttons, or indicators		Stop CV-02 on Panel B.
Isolator switch	a switch used to disconnect power		Switch off isolator B-14.
Restricted area	an area you must not enter		Do not enter the restricted area.
Safety glasses	PPE that protects your eyes		Wear your safety glasses.

4.2 COMMUNICATION WORDS

The words below are useful when you need to give, check, or clarify information at work. Read each word, its meaning, and the example. Then, cover the meanings and take turns testing your partner.

Word	Meaning	Example
confirm	say that information is correct	Please confirm the code.
repeat	say something again	Could you repeat the number, please?
slowly	not fast	Could you say the code slowly, please?
correct	right; accurate	Yes, that is correct.
record	write information on a form or log	Record the result.
report	tell the responsible person about a problem	Stop and report the problem.
supervisor	the person responsible for directing/ checking the work	Ask the supervisor before you start.

KNOWLEDGE CHECK

Complete with (record - report - repeat)

1. Could you ..... the code, please?
2. ..... the result on the check sheet.
3. Stop and ..... the problem.

4.3 SOUND CHECK - Clarify up, confirm down

NOTICE IT

When you ask a short clarification question, your voice usually rises at the end. When you confirm information, your voice usually falls. Stress the critical word, code, or number: "Do you mean B-FOURTEEN? ↑""Confirmed: B-FOURTEEN. ↓"

Voice pattern	Say it
Clarification - rising ↑	Do you mean B-14? ↑
Clarification - rising ↑	Should I stay in this area? ↑
Clarification - rising ↑	Is that Panel B? ↑
Confirmation - falling ↓	Yes, that is correct. ↓
Confirmation - falling ↓	Confirmed: B-14. ↓

PAIR WORK - LISTEN AND ECHO

Student A reads a question with a rising voice. Student B repeats it. Then, Student A reads the confirmation and Student B repeats it with a falling voice. Change roles.

- Do you mean CV-02? ↑ → Yes. CV-02. ↓
- Is that B-14? ↑ → Correct. B-14. ↓
- Should I stay inside the yellow line? ↑ → Yes. Stay inside the line. ↓

KNOWLEDGE CHECK

Draw ↑ or ↓ at the end. Then, read the lines aloud with your partner.

1. Is that B-14? .....
2. Yes, that is correct. .....
3. Should I record it here? .....
4. Confirmed: first I stop CV-02. .....

5 Before you listen

WORKPLACE SCENARIO

Morning practice

Mechatronics Workshop Bay 2:

A supervisor checks that a trainee understands the instructions before a conveyor inspection.

GROUP WORK: Work in groups of three. Read the situation. Student 1 chooses one unclear detail. Student 2 chooses a question type. Student 3 asks the question. Then, change roles and try again.

Unclear detail	Question type	Question starter
B-14	check a code	Do you mean ...?
yellow work area	check an action	Should I ...?
where to write the result	ask for a place	Where should I ...?
a word you did not hear	ask again	Could you repeat ...?

Example:

Situation: The supervisor says, "Inspect Panel B-14 before starting." You are not sure whether you heard the panel code correctly.

Student 1: Unclear detail → B-14

Student 2: Question type → Check the code

Student 3: Clarification question → "Do you mean B-14?"

Now, do the same with the other unclear details in the table.

6 Listening

AUDIO 2.1 - Closed-loop check before inspection

LISTENING PURPOSE

- You will hear a supervisor giving safety instructions to a trainee before an inspection. Listen to how the trainee checks and confirms the instructions.
- You will listen TWICE. First, listen for the main purpose. Then, listen again for the exact area, equipment, code, order, and stop/report condition.
- In a workshop, the main idea gives you the job. The details help you do it safely.

FIRST LISTENING - Choose the best answer.

What is the main purpose of the exchange?

a. Repair the machine.

b. Confirm the safety instructions.

c. Order new equipment.

SECOND LISTENING - Complete the instruction card. For each item, write the information you hear in the briefing.

Information	Details from the briefing
Work area	
PPE	
Machine	
Panel	
Isolator code	
Prohibited action	
Stop/report condition	

LISTEN AGAIN AND ANSWER THE FOLLOWING QUESTIONS:

1. True (T) or False (F):

1. The trainee stays inside the yellow work area. True ☐ False ☐
2. The trainee switches off B-41. True ☐ False ☐
3. The trainee may open the guard. True ☐ False ☐
4. The trainee records the result on the pre-use check sheet. True ☐ False ☐
5. If the red indicator stays on, the trainee must stop and report. True ☐ False ☐

2. SHORT ANSWER:

Why does the trainee ask about B-14?

PAIR CHECK: Compare your instruction cards. If one answer is different, say: "I heard _____."

LANGUAGE IN CONTEXT - What did the speakers do?

Match each phrase with its job in the conversation

Phrase	Job	Answer
1. Do you mean B-14?	a. shows the message is now clear	____
2. Should I stay inside the yellow line?	b. asks the other person to check the full message	____
3. First... Next... Then... Finally...	c. checks one unclear code	____
4. Is that correct?	d. message checks the trainee's action	____
5. Confirmed: ...	e. keeps actions in order	____

POST-LISTENING MEANING CHECK - Communication words

Work in pairs: Match 1-5 with a-e.

Word	Answer	Meaning
1. confirm	____	a. say something again
2. repeat	____	b. not fast
3. slowly	____	c. say information is correct
4. record	____	d. write information on a form
5. report	____	e. tell the responsible person about a problem

7 Message Check

INDIVIDUAL → PAIR CHECK

Do the tasks alone first. Then, compare your answers with a partner.

7.1 Choose the correct answer from a, b, or c:

1. Why does the trainee ask, "Do you mean B-14?"

a. The code is unclear.

b. The trainee wants a new machine.

c. The trainee wants to leave.

2. Where does the trainee stop CV-02?

a. At Panel B

b. At the robot cell

c. At the workshop door

3. What must the trainee NOT open?

a. The check sheet

b. The guard

c. The yellow line

4. When must the trainee stop and report?

a. If the red indicator stays on

b. If the glasses are clear

c. If the panel is blue

7.2 Put the read-back in order (1-4).

Read the four sentences. Number them 1–4 in the correct order.

Write 1 for the first action and 4 for the last action.

☐ Finally, I record the result on the pre-use check sheet.

☐ Next, I switch off B-14 beside Panel B.

☐ First, I stop CV-02 at Panel B.

☐ Then, I check that the red indicator is off.

8 Think It Through

PAIR WORK → GROUP SHARE.

First, discuss the questions with your partner and take turns answering. Then, choose one answer you both agree on. Join another pair and share your answer with the group:

1. Why is "B-14" clearer than "that switch"?

2. What can the trainee say if the code is still not clear?

3. Why does the trainee say the full message back?

4. Which detail is most important to say exactly: machine, code, location or condition? Why?

9 DID YOU KNOW?

The UK Health and Safety Executive warns that poorly planned or poorly communicated instructions before machinery maintenance can cause confusion and accidents. Clear instructions matter even more when maintenance happens during normal production or when people are unfamiliar with the site.

Source: UK Health and Safety Executive (HSE), Providing and using work equipment safely: A brief guide, 2026, p. 5.

10 Build the Message - Language focus

This section gives you the language you need for the Shift Challenge. For each part: notice the pattern, practise it, then do the Knowledge Check.

10.1 ASK SOMEONE TO SAY IT AGAIN

NOTICE IT

If you do not hear a word, number or code, do not guess. Ask the speaker to say it again.
Use: **"Could you repeat the code, please?" or "Could you say that slowly, please?"**
If a technician does not hear an instruction correctly and does not ask, they may use the wrong setting, go to the wrong area, or miss an important safety step. Asking again is safer than guessing.

SPEAKING PRACTICE:

PAIR WORK: Student A reads one message quietly and quickly. Student B listens and asks Student A to repeat it. Student A says the message again, slowly and clearly. Then, change roles and repeat the activity.

- A: Switch off B-14 beside Panel B.
- A: Check switch S-12 on Panel C.
- A: Record the result at Station 3.

KNOWLEDGE CHECK

You did not hear the code. What should you say?

a. Could you repeat the code, please?

b. You speak so fast.

c. Code maybe.

10.2 CLARIFY ONE EXACT DETAIL

NOTICE IT

Ask about the exact thing that is unclear. Choose the question that matches your problem:

Do you mean + code/thing?

Should I + action?

Is that + code/location?

Where should I + action?

What is unclear?	Pattern	Example
thing/code	Do you mean + noun/code?	Do you mean B-14?
your action	Should I + base verb...?	Should I stay inside the yellow line?
information	Is that + noun/code/location?	Is that Panel B?
place	Where should I + base verb...?	Where should I record the result?

SPEAKING PRACTICE:

PAIR WORK: Student A reads the message. Student B asks a question about anything that is not clear. Student A answers. Then, change roles.

1. "Use the switch near the panel." → ask about the switch/code.
2. "Record it there." → ask about the place.
3. "Stay in the work area." → check the area.
4. "Wear the PPE." → ask which PPE.

KNOWLEDGE CHECK

Choose the correct question for each situation.

1. You are not sure which machine:

a. Do you mean CV-02?

b. Machine, yes?

2. You do not know the place for the record:

a. Record where?

b. Where should I record it?

10.3 READ THE MESSAGE BACK IN ORDER

NOTICE IT

A read-back is not a new instruction. You say the important message back in the same order.

Use First, Next, Then, and Finally so the listener can follow the steps.

Order	Pattern	Example
1	First, I + action	First, I stop CV-02.
2	Next, I + action	Next, I switch off B-14.
3	Then, I + action	Then, I check the red indicator.
4	Finally, I + action	Finally, I record the result.

SPEAKING PRACTICE:

GROUP WORK: BUILD THE CHAIN. Work in groups of four. Each student takes one word: FIRST / NEXT / THEN / FINALLY. Build one complete read-back. You could use the sentences below or think of your own chain.

- Stop CV-02 at Panel B.
- Switch off B-14.
- Check the red indicator.
- Record the result.

KNOWLEDGE CHECK

Number the lines 1-4.

a. ___ Finally, I record the result.

b. ___ Then, I check the indicator.

c. ___ First, I stop CV-02.

d. ___ Next, I switch off B-14.

10.4 CLOSE THE LOOP - ASK FOR CONFIRMATION

NOTICE IT

After your read-back, ask the other person to check it: "Is that correct?" The supervisor can say "Yes, that is correct," or correct a mistake before you act. "Confirmed" shows the message is now clear.

PAIR WORK - MINI LOOPS

Student A gives one short instruction. Student B asks one clarification question, reads the instruction back, and ends with "Is that correct?" Student A confirms or corrects the read-back. Change roles.

KNOWLEDGE CHECK

Complete the mini dialogue with: correct / confirmed /Is that correct?

Supervisor: "Switch off B-14 beside Panel B."

Trainee: "I switch off B-14 beside Panel B. _____"

Supervisor: "Yes, that is _____."

Trainee: "_____: B-14 beside Panel B."

10.5 PUT IT ALL TOGETHER - THE COMMUNICATION LOOP

4-MOVE LOOP

1 Ask if needed → 2 Read back → 3 Ask "Is that correct?" → 4 Receive confirmation or correction.

GROUP WORK - COMMUNICATION COACH:

Work in groups of three:

Student A – **Supervisor:** Give the instruction → confirm or correct

Student B – **Trainee:** Clarify → read back → ask for confirmation

Student C – **Coach:** Listen → tick each move

Use one instruction card. Then, change roles and repeat.

Move	Coach tick
Trainee asks one specific clarification question.	☐
Trainee reads back the message.	☐
Trainee uses sequence words.	☐
Trainee asks for confirmation.	☐
Supervisor confirms or corrects.	☐

KNOWLEDGE CHECK

Which order completes the communication loop?

a. Guess → act → ask later

b. Ask → read back → check → receive confirmation

c. Read back → leave → report

11 Your Shift Challenge

PAIR ROLE-PLAY - CLOSED-LOOP INSTRUCTION EXCHANGE

Work in pairs. Student A is the supervisor. Student B is the trainee. Student A gives the instruction, and Student B chooses one unclear detail to clarify. Student B asks a clarification question, reads the full message back, and asks for confirmation. Student A confirms or corrects the read-back. Then, change roles and repeat with a new card.

You have 2 minutes to prepare. You may write keywords only. Your exchange should last 60–90 seconds.

Productive skill	Speaking
student role	Student A: supervisor / experienced technician. Student B: trainee technician
audience/recipient	Supervisor and trainee technician
trigger/problem	The supervisor gives a short instruction. The trainee chooses one unclear detail from the card to clarify
purpose	Clarify one detail, read back the complete message, and obtain confirmation before action
success evidence	At least one specific clarification question, an accurate ordered read-back, and a clear confirmation ending

ROLE-PLAY CARDS

Scenario	Supervisor Information
Card A - Conveyor check	Stop CV-07 at Panel D. Switch off isolator D-16. Stay inside the blue work zone. Do not open the guard. Record the result on the inspection sheet.
Card B - Control panel check	Inspect Panel C-03. Wear safety glasses. Check switch S-12. Do not energise the panel. Report any damaged label to the supervisor.
Card C - Robot-cell boundary	Stay outside the marked robot-cell area. Check the warning sign at Gate R-2. Do not enter the cell. Record the sign condition. Report if the sign is unreadable.

Your Communication Toolkit

Use the phrases below when you need to ask, clarify, read back, or confirm information during the role-play:

Communicative move	Useful chunks/sentence frames
Ask for repetition	Sorry, could you repeat the code, please? / Could you say that slowly, please?
Clarify a detail	Do you mean D-16? / Should I stay in this area? / Is that Panel D?
Ask for location	Where should I record the result?
Read back in order	First, I... Next, I... Then, I... Finally, I...
Check the whole message	I'll read that back. Is that correct?
Confirm	Confirmed: first, I... / Yes, that is correct.

12 Now I Can!

☐ I can ask for repetition when one detail is unclear.

☐ I can ask a short question about a machine, code, location or action.

☐ I can read a short instruction back in the correct order.

☐ I can ask "Is that correct?" before I act.

☐ I can say critical codes and numbers clearly.

13 Look Back, Level Up

1. Which question was easiest for you: Do you mean...? Should I...? or Where should I...?

2. Which detail was hardest to say clearly: machine, code, location, or condition?

3. How did sequence words help your read-back?

4. What will you say next time you do not understand one safety detail?

14 Before You Clock Out

STUDENT PROMPT

Your teacher says one short instruction with a code and location. Ask one clarification question. Then, say the corrected message back and finish with "Is that correct?"

Quick success check: ☐ one specific question ☐ correct code/location ☐ read-back + "Is that correct?"

15 Job-Site Word Bank

English word/ chunk	English meaning	Arabic equivalent	See It on the Job
confirm	say that information is correct	يؤكد	Please confirm the code.
repeat	say something again	يكرر	Could you repeat the number?
slowly	not fast	ببطء	Could you say it slowly?
correct	right; accurate	صحيح	Yes, that is correct.
work area	the part of the workshop where work is allowed	منطقة العمل	Stay inside the work area.
equipment	machines and tools used for work	معدات	Do not touch the equipment yet.
control panel	panel with switches/ buttons/indicators	لوحة تحكم	Stop CV-02 at Panel B.
isolator switch	switch used to disconnect power	مفتاح عزل	Switch off B-14.
record	write information on a form	يسجل	Record the result.
report	tell the responsible person about a problem	يُبلّغ	Stop and report.
read-back	say the important message back to check it	إعادة ترديد التعليمات للتأكد	I'll read that back.

LESSON 3 READ THE RISK: SIGNS, LABELS AND SAFE-USE MESSAGES

Skill focus: Reading

Read short workshop signs and labels. Find the hazard, the action you must not do, the protection you need, or the safe-use instruction.

1 Introduction to the lesson

Before a technician uses a training rig, the workshop gives short safety messages on signs, labels, and equipment plates. You do not need to read long technical texts. You need to find the important message quickly: What is the hazard? What must you do? What must you not do? What PPE is required? In this lesson, you will practise reading and understanding these messages in clear, simple English.

A training rig is a machine or equipment setup used for practice and learning. It helps technicians train safely before working on real machines.

2 Communication Goals (ILOs)

By the end of the lesson, you will be able to:

- locate the main safety message in a short workshop sign or label.
- identify the hazard, prohibited action, required PPE, or safe-use instruction.
- find simple equipment identification information such as a model or label.
- tell a partner the message in one short sentence.

3 Start-Up Check

PAIR WORK: Work with a partner. Look at the pictures of safety items and signs. Do not use a dictionary. Take turns saying one word or phrase you already know for each picture.

1. ..... **2.** ..... **3.** ..... **4.** .....

GROUP SHARE: Join another pair to make a group of four. Choose one picture and discuss what the picture means. Take turns completing the sentence:

"This message tells me to / not to _____."

4 Pre-reading vocabulary and pronunciation

4.1 Vocabulary

Look at each picture. Read the word or chunk and the example with a partner.

Word/chunk	Meaning	Visual cue	Example
warning	a message that tells you about a possible hazard		Read the warning before you enter.

danger	a very serious hazard message		Danger: keep out.
high voltage	electricity at a dangerous voltage		Danger: high voltage.
compressed air	air stored or used under pressure		Keep clear of the compressed-air line.
rotating parts	machine parts that turn		Keep clear of rotating parts.
hot surface	a surface that may burn you		Do not touch the hot surface.
keep clear	stay away from an area or hazard		Keep clear of the machine.
authorised personnel	people who have permission to enter or work		Authorised personnel only.
safety glasses	PPE that protects the eyes		Safety glasses required.
gloves	PPE that protects the hands		Wear the correct gloves.

model	the identifying type or version of equipment		Model: HP-100.
label	a small plate or sticker with information		Read the equipment label.

PAIR WORK: QUICK MATCH

Student A points to a picture. Student B says the word. Then, change roles. Take turns until you have practised all 12 words.

KNOWLEDGE CHECK - Vocabulary

Complete with one word:

1. ..... voltage

2. ..... surface

3. ..... parts

4. safety .....

5. authorised .....

4.2 Sound Check - Hear the key safety word

NOTICE IT

This is a pronunciation review, not a new sound. In short safety messages, the key word is usually clear and strong. Listen for it. It helps you understand the message quickly.

Strong key word	Model message
WARNING	WARNING - rotating parts
DANGER	DANGER - high voltage
CLEAR	KEEP CLEAR
GLASSES	Safety GLASSES required
ONLY	Authorised personnel ONLY

PAIR WORK- LISTEN AND TAP

Student A reads one model message aloud. Student B listens carefully. When you hear the strong key word, tap the desk. Then, change roles and repeat.

KNOWLEDGE CHECK-Pronunciation

Underline the word you expect to hear most clearly:

1) Danger - high voltage
2) Keep clear
3) Safety glasses required
4) Authorised personnel only

5 Before You Read

GROUP WORK: Look at the three workplace pictures. For each picture, choose one or more types of information:

A hazard - A prohibited action - PPE - Equipment information

Picture A. ..... **Picture B:** ..... **Picture C:** .....

READING TIP: Before you read, look at your answers above. These are different types of safety messages. Safety messages help technicians stay safe, follow instructions, use PPE, and use equipment correctly. In the reading below, you will see different safety messages. Look for the key information in each one.

6 Reading

Safety messages around Training Rig TR-03

You are checking the signs and labels before a supervised workshop activity. Read the six safety messages and look for the main safety information in each one. Do not translate every word.

A. WARNING - ROTATING PARTS

Keep clear. Do not touch the guard or moving parts while the rig is running.

B. DANGER - HIGH VOLTAGE

Do not open the electrical cabinet. Authorised personnel only.

C. CAUTION - COMPRESSED AIR

Keep clear of the hose. Switch off the air supply before disconnecting it.

D. WARNING - HOT SURFACE

Do not touch. Wait for the surface to cool before inspection.

E. PPE REQUIRED - EYE PROTECTION

Wear safety glasses in this work area.

F. EQUIPMENT IDENTIFICATION LABEL

Training Rig: TR-03 | Model: MR-120 | Supply: 24 V DC

Safe-use note: Keep the guard closed during operation.

Language in Context:

Language element	Example from the reading	What it helps the technician understand
Hazard words	high voltage; rotating parts; hot surface	what the hazard is
Prohibition	Do not open. / Do not touch.	what action is not allowed
Safe action	Keep clear. / Wear safety glasses.	what action is required
Restriction	Authorised personnel only.	who may enter or act
Equipment information	Model: MR-120 / Supply: 24 V DC	which item the label describes
Safe-use information	Keep the guard closed during operation.	how to use the equipment safely

7 Message Check

INDIVIDUAL → PAIR CHECK:

Do the tasks alone first. Then, compare with a partner. Read the sign again if you are not sure.

7.1 Match each of the places below to the suitable message from the reading a-f:

1. Electrical cabinet .....
2. Pneumatic hose .....
3. Hot machine surface .....
4. Eye-protection area .....
5. Moving machine parts .....
6. Training rig nameplate .....

7.2 Choose the best meaning:

1. "Authorised personnel only" means:

a. everyone may enter **b.** only permitted people may enter **c.** wear gloves

2. "Keep clear" means:

a. stay away **b.** clean the sign **c.** start the machine

3. "Do not open" means:

a. opening is required **b.** opening is not allowed **c.** open slowly

4. "Safety glasses required" means:

a. eye protection is needed **b.** glasses are optional **c.** read the model number

7.3 Read messages A, B, C, D, and E again, then complete the table below with the main information from each message:

Message	Hazard/Item	Do/ Required	Do not/ Restriction
A	.....	.....	.....
B			
C	.....	.....	.....
D	.....	.....	.....
E	.....	.....	.....

7.4 Read Message F, and find the information about the training rig:

1. What is the training-rig number? .....
2. What is the model? .....
3. What is the supply? .....
4. What must stay closed during operation? .....

8 Think It Through

PAIR WORK→ GROUP SHARE

Work with a partner. Answer the questions using short English answers. Then, join another pair and share your answers.

1. Which message tells you about the most restricted area? Why?

.....

2. Which message tells you to wear PPE?

.....

3. Which messages use "Do not ..."?

.....

4. Why is the model number useful on an equipment label?

.....

5. If a sign is damaged and you cannot read it, should you guess the message? What should you do?

.....

I always check the label, warnings, and instructions first. If something is not clear, I ask and report it.

9 DID YOU KNOW?

Good technicians should check identification information, safety markings, warnings, and manufacturer instructions before using equipment. If important information is missing, unreadable, or inconsistent, the technician should record what is visible and report it rather than guess. This is why careful reading is a real workplace skill.

10 Build the Message - Language focus

These phrases help you understand safety signs and talk about them in Lesson 4.

Look at the examples, practise the pattern, and then do the Knowledge Check.

10.1 Read what NOT to do: Do not + verb

NOTICE IT: "Do not" tells you that an action is not allowed.

Pattern:

Do not + base verb

- Do not touch.
- Do not open.
- Do not enter.

Remember: Do not use **to** after "do not".

Purpose	Pattern	Example
Prohibit an action	Do not + base verb	Do not touch.
Prohibit entry	Do not + enter/open	Do not open the cabinet.
Keep distance	Keep + clear / away	Keep clear.

PAIR WORK - CHOOSE THE SAFETY MESSAGE

Work in pairs. Student A reads a hazard.

Student B chooses the correct safety message. Then, change roles.

Example:

Student A: "High voltage."

Student B: "Do not open."

Hazards:

- High voltage → Do not open.
- Rotating parts → Do not touch.
- Hot surface → Do not touch.

KNOWLEDGE CHECK

Choose the correct form:

1. Do not [to touch / touch].
2. Do not [open / opening].
3. Keep [clear / clearing].

10.2 From Short Safety Signs to Full Messages: Using "Must"

NOTICE IT

Safety signs can show a required action in different ways:

- Wear + noun: "Wear safety glasses."
- Noun + required: "Safety glasses required."
- Must + verb: "You must wear safety glasses."

All three tell you that the action is required.

Look at how a short safety sign becomes a full safety message:

Short sign	Full message	Meaning
Safety glasses required	You must wear safety glasses.	Eye protection is required.
Wear gloves	You must wear gloves.	Hand protection is required.
Keep clear	You must stay clear.	Stay away from the hazard.

GROUP WORK- SHORT SIGN → FULL MESSAGE

In groups of three, each student takes one message. Student 1 reads the short sign. Student 2 says the full sentence with must. Student 3 checks the meaning. Rotate roles.

KNOWLEDGE CHECK:

Complete:

1. You must ..... safety glasses.

2. Safety glasses ..... .

3. You must ..... clear of rotating parts.

10.3 Read Short Noun Phrases: High voltage / Hot surface / Rotating parts

NOTICE IT

Many safety signs do not use a full sentence. A short noun phrase names the hazard. Read the hazard first. Then, look for the safety action.

PAIR WORK- MATCH THE HAZARD AND ACTION

Work with a partner. Match each hazard with the correct safety action. Write the correct action next to each hazard:

(a. Do not touch. / b. Keep clear. / c. Do not open.)

Hazard	Safety action
1. High voltage	
2. Hot surface	
3. Rotating parts	

KNOWLEDGE CHECK:

Which phrase names the hazard? Circle one in each pair:

1. high voltage / do not open

2. hot surface / keep clear

3. wear safety glasses / rotating parts

TAKEAWAY

READING STEPS:

1. Look at the sign or label. → ***2.*** Find the hazard or item. → ***3.*** Find what you must do or must not do.→ ***4.*** For equipment labels, check the name, model, or number.

11 Your Shift Challenge

PAIR / GROUP TASK

Complete a Safety Sign Station Walk. Your main skill is reading. At each station, read the safety sign and say one short sentence to show what it means.

Task element	Instructions
Student role	You are a trainee mechatronics technician checking signs before a supervised task
Audience/partner	A trainee partner and your teacher
Workplace setting	Six sign/label stations around a simulated training rig
Trigger	You must understand the safety messages before the activity starts
Purpose	Read each sign accurately and explain its main message in simple English
Information to include	For each station: hazard/item + required action OR prohibited action OR PPE/restriction. For the equipment label: rig/model + safe-use note
Output conditions	Groups of three. Rotate through 6 stations. 60 seconds per station. Write keywords only. Then, say one short message to your partner
Success evidence	You correctly identify at least 5 of 6 main messages and do not reverse a prohibition or PPE requirement

Station record

Station	Hazard/Item	Main action/ Restriction	My short message
1			
2			
3			
4			
5			
6			

Your Communication Toolkit

Communicative move	Useful chunks/sentence frames
Name the message	This is a warning/danger / PPE sign.
Name the hazard	The hazard is high voltage / rotating parts / a hot surface.
Say the prohibition	It says: "Do not touch/open/enter."
Say the required action	It says: "Keep clear. / Wear safety glasses."
Say the restriction	Authorised personnel only.
Read equipment information	The rig is TR-03. The model is MR-120.
Check with a partner	Does this mean we must stay clear? / Is this the model number?

12 Now I Can!

☐ I can find the main message in a short safety sign.

☐ I can identify a hazard word such as high voltage, hot surface, or rotating parts.

☐ I can understand "Do not...", "Keep clear", "required" and "only".

☐ I can tell a model or equipment number on a simple label.

☐ I can tell a partner the sign message in one short sentence.

13 Look Back, Level Up

1. Which sign was easiest to understand? Why?

.....

2. Which two words helped you recognise a prohibition?

.....

3. Which vocabulary picture helped you remember a new word?

.....

4. What will you do if a workplace label is unclear or damaged?

.....

14 Before You Clock Out

STUDENT PROMPT

Read the statement below:

"DANGER - HIGH VOLTAGE. Do not open. Authorised personnel only."

In 30 seconds, write:

1. The hazard ..... .

2. The prohibited action ..... .

3. Who may enter ..... .

15 Job-Site Word Bank

English word/ chunk	English meaning	Arabic equivalent	See It on the Job
warning	message about a possible hazard	تحذير	Read the warning.
danger	very serious hazard message	خطر	Danger: keep out.
high voltage	dangerous electrical voltage	جهد كهربائي عالٍ	Danger: high voltage.
compressed air	air used under pressure	هواء مضغوط	Keep clear of the compressed-air line.
rotating parts	parts that turn	أجزاء دوّارة	Keep clear of rotating parts.
hot surface	surface that may burn	سطح ساخن	Do not touch the hot surface.
keep clear	stay away	ابتعد / ابقَ بعيدًا	Keep clear of the machine.
authorised personnel	people with permission	الأشخاص المصرح لهم	Authorised personnel only.
safety glasses	eye-protection PPE	نظارات السلامة	Safety glasses required.
gloves	hand-protection PPE	قفازات	Wear the correct gloves.
model	equipment type/version	طراز / موديل	Model: MR-120.
label	plate/sticker with information	ملصق / بطاقة بيانات	Read the equipment label.

LESSON 4

SPEAK UP FOR SAFETY: WARN A COLLEAGUE

Skill focus: Speaking

Notice a workshop hazard, get a colleague's attention, point out the problem, and say exactly what the person must do or must not do.

Main Communication Outcome

Give a short immediate warning that identifies the hazard and tells a colleague exactly what to do or not do.

1 Introduction to the lesson

In a workshop, a hazard can appear during a normal task: a cable across a walkway, a sharp metal edge, a loose guard, a rotating part, or a spill. A technician may need to warn a colleague immediately. Your language must be short, clear, and safe. In this lesson, you will practise saying what you see and telling a colleague exactly what to do or not do.

2 Communication Goals (ILOs)

By the end of the lesson, you will be able to:

- give a short immediate warning to a colleague.
- point out a hazard using simple words such as "There is a loose cable here."
- tell a colleague what to do or not do using clear workshop language.
- use firm falling intonation and make must / mustn't easy to distinguish.

3 Start-Up Check

In pairs, look at the five workplace photos. For each photo, say "Safe" or "Not safe." If it is not safe, say one word that describes the problem.

Example: "Not safe – cable."

.....

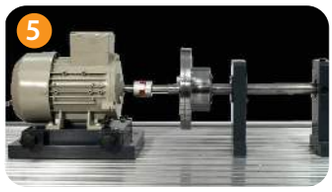

.....

.....

.....

.....

GROUP SHARE

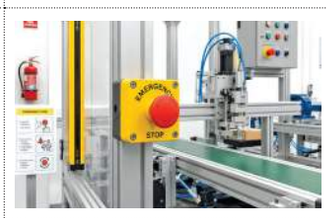

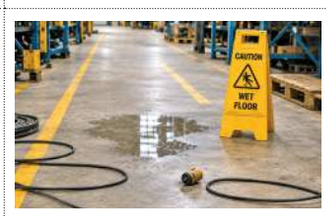

Join another pair to make a group of four. Choose two photos that show something unsafe. Take turns giving a short warning for each photo. Use any English you already know.

4 Pre-listening vocabulary and pronunciation

4.1 Vocabulary

Every word or chunk has a visual cue. Look at the picture first. Then, read the meaning and example with a partner.

Word/chunk	Meaning	Visual cue	Example
sharp edge	an edge that can cut skin		Keep clear of the sharp edge.

cable	a wire used to carry electricity or signals		There is a cable across the floor.
walkway	a marked path for people to walk		Keep the walkway clear.
guard	a barrier that covers a dangerous machine part		Do not use the machine without the guard.
spill	liquid on the floor by accident		There is a spill near the machine.
rotating part	a machine part that turns		Keep clear of the rotating part.
machine	a piece of equipment that does a job		Do not start the machine.
clear	free from people or objects		Keep the area clear.
loose	not fixed or tight		The cable is loose.
missing	not there; not in its place		The guard is missing.

wear	have clothing or PPE on your body		Wear your safety glasses.
report	Tell the responsible person about a problem		Stop and report the problem.
supervisor	The person who oversees the work		Report the hazard to the supervisor.

PAIR WORK - PICTURE QUICK-FIRE

Student A points to a picture. Student B says the word or chunk. Change roles after six pictures.

KNOWLEDGE CHECK

Complete each item with a word from the vocabulary table:

1) sharp .....
2) rotating .....
3) ..... the hazard
4) ..... safety glasses
5) the guard is .....

4.2 Sound Check - Make the warning sound clear

NOTICE IT

In a safety warning, some words are more important than others. Make the important word stronger by saying it a little louder and more clearly. Your voice usually goes **DOWN** ↓ at the end of the warning. This makes your warning sound clear and firm.

Listen carefully to **MUST** and MUSTN'T. **MUST** means something is required, while **MUSTN'T** means something is not allowed. Saying **MUSTN'T** clearly is important because it changes the safety meaning.

This highlights three important points:

1. **What to stress** → the important words
2. **How to say it** → louder and more clearly + voice goes down
3. **Why MUST/MUSTN'T** matter → they have opposite safety meanings

Look at the examples. Notice the strong word and the falling voice:

What to hear	Warning	What to do
Strong action word	STOP. ↓	Stress STOP.
Firm warning	KEEP CLEAR. ↓	Let your voice fall at the end.
Prohibition	DO NOT TOUCH. ↓	Stress NOT or TOUCH.
Obligation	You MUST wear safety glasses. ↓	Make MUST clear.
Negative obligation	You MUSTN'T touch the part. ↓	Make MUSTN'T clearly negative.

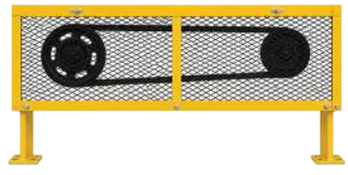

PAIR WORK - VOICE DOWN

Student A reads a warning. Student B points down with a finger when the voice falls. Then, change roles. Read all five models.

KNOWLEDGE CHECK

Listen to your teacher. Write M for must or MN for mustn't:

1) You ..... touch the rotating part.
2) You ..... wear safety glasses.
3) You ..... use the machine with a missing guard.
4) You ..... report the hazard.

5 Before you Listen

In groups of 3, look at the three photos. For each photo, choose the first word you would say: **STOP / KEEP CLEAR / WEAR / REPORT**. More than one answer can be possible. Be ready to explain your choice in one short sentence.

A. .....

B. .....

C. .....

6 Listening

Audio 4.1 LISTENING | Workshop walk-through: six quick warnings

LISTENING TIP:
Listen for four things:
1) warning word
2) hazard
3) what to do or not do
4) what to do next
After listening, answer the questions below.

6.1 True or False?

1. The cable is across the walkway. ☐ True / ☐ False
2. The trainee may touch the sharp edge. ☐ True / ☐ False
3. The guard on Training Rig 4 is missing. ☐ True / ☐ False
4. The trainee should walk through the spill. ☐ True / ☐ False
5. The trainee must wear safety glasses. ☐ True / ☐ False

6.2 Complete the warnings. Choose the correct word from the box. Use each word once.

Word box:

report - use - stop - wear - touch - clear

1. _____ There is a cable here.
2. Keep _____ of the rotating part.
3. Do not _____ the sharp edge.
4. Do not _____ the machine with a missing guard.
5. You must _____ safety glasses.
6. Stop and _____ the hazard.

7 Language in Context

Language element	Example from the listening	What it helps the technician communicate
Point out a hazard	There is a cable across the walkway.	Show what/where the problem is
Immediate warning	Stop. / Keep clear.	Get attention and move the person away
Prohibition	Do not touch it. / Do not use the machine.	Say what must not happen
Obligation	You must wear your safety glasses.	Say what is required
Reporting action	Report it to me.	Say the next safe communication step

INDIVIDUAL → PAIR CHECK:

Do each task alone first. Then, compare with a partner. Listen again if your answers are different.

7.1 Match the hazard to the warning.

Hazard	Warning/action
1. Cable across walkway	a. Do not use the machine.
2. Sharp edge	b. Keep clear and report it.
3. Missing guard	c. Do not touch it.
4. Rotating coupling	d. Do not reach near it.
5. Spill	e. Do not walk through it.

7.2 Write a short answer to each question

1. Where is the spill? .....
2. What is missing from Training Rig 4? .....
3. What PPE must the trainee wear? .....

8 Think It Through

PAIR WORK → GROUP SHARE

Work with a partner. Answer the questions using short answers. Then, join another pair and compare your answers.

1. Why is "Be careful" weaker than "Stop. Keep clear of the cable"?

2. Which warning in the listening gives both a hazard and a safe action?

3. What can you say if the guard is missing?

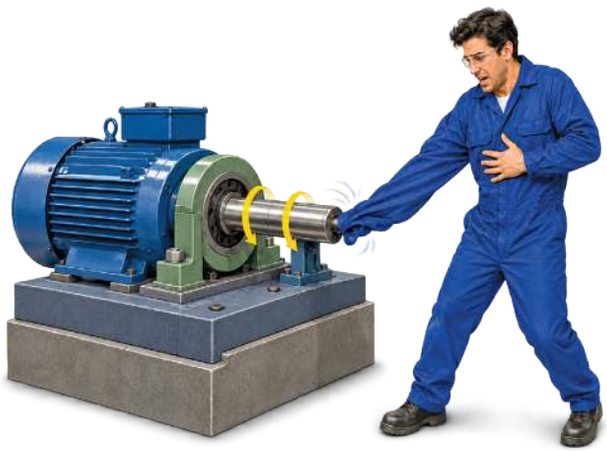

4. What should you do after you warn someone about a hazard?

5. Which warning would you use first if a colleague is about to touch a rotating part?

9 DID YOU KNOW?

Even a smooth rotating shaft that turns slowly can catch hair or loose clothing and pull it into the moving parts. A low speed can still be dangerous. This is one reason technicians keep clear of rotating shafts and couplings and never judge the hazard only by how fast the part looks.

Source: OSHA Machine Guarding eTool - Hazardous Motions/Actions: Rotating Motion. https://www.osha.gov/etools/machine-guarding/introduction/hazardous-motions-actions

10 Build the Message - Language focus

A strong warning is usually short. First, point out the hazard. Then, say the safe action or the prohibited action. Notice the pattern, practise it, and do the Knowledge Check before you move on.

10.1 Point out the hazard: There is / There are

NOTICE IT

- Use "There is" for one thing
- Use "There are" for more than one thing
- Add the place when it helps

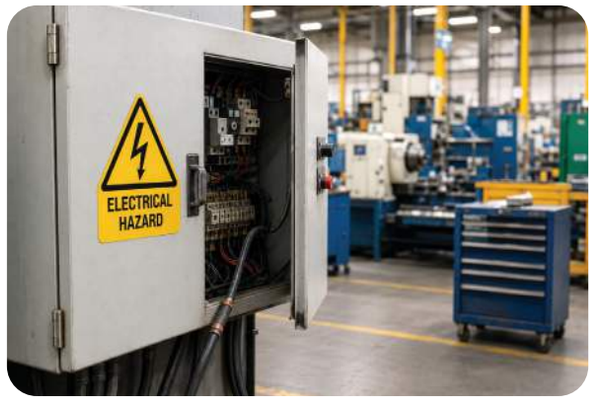

Examples:

- "There is a cable here."
- "There are metal offcuts **near the walkway."**

Meaning	Pattern	Example
One hazard	There is + singular noun + place	There is a spill near the panel.
More than one	There are + plural noun + place	There are cables on the floor.

PAIR WORK- POINT IT OUT

In pairs, Student A points to one photo. Student B makes a "There is / There are" sentence. Change roles.

KNOWLEDGE CHECK

Choose is or are:

1. There ..... a spill here.
2. There ..... two cables on the floor.
3. There ..... a sharp edge near the rack.

10.2 Say what NOT to do: Do not + base verb

NOTICE IT

After "Do not", use the base verb:

Examples:

- Do not touch.
- Do not use.
- Do not step on it.

Use "Do not + base verb" to say that something is not allowed.

FORM:

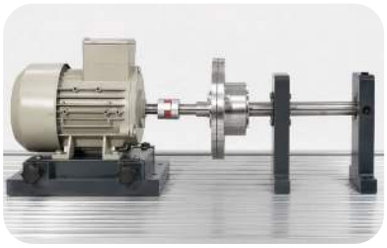

Build it this way: **DO NOT + base verb + object/place.**

Examples:

- "Do not touch the sharp edge."
- "Do not use the machine."

GROUP WORK - BUILD THE WARNING:

Work in groups of three. Student 1 chooses one of the three hazard photos below. Student 2 gives a "Do not …" warning. Student 3 checks the verb. Rotate roles.

KNOWLEDGE CHECK

Put the words in order:

1) touch / do / edge / not / the / sharp
2) machine / use / do / the / not
3) spill / through / do / walk / not / the

10.3 Say what is required: must / must not + base verb

NOTICE IT

- Use "must" for a required action.
- Use "must not / mustn't" for something that is not allowed.
- Never use "to" after must.

Example:

- **You must wear safety glasses.** ✓
- **NOT:** You must to wear safety glasses. ×

Purpose	Pattern	Example
Required action	must + base verb	You must wear safety glasses.
Not allowed	must not / mustn't + base verb	You must not touch the rotating part.

PAIR WORK - COMPLETE AND SAY:

With a partner, complete two mini-dialogues:

A: "There is a spill here." B: "You _____ keep clear."

A: "The guard is missing." B: "You _____ use the machine."

KNOWLEDGE CHECK

Complete with must or must not:

1) You _____ wear safety glasses.

2) You _____ touch a rotating shaft.

3) You _____ report a serious hazard.

4) You _____ use a machine with a missing guard.

10.4 Useful warning chunks

NOTICE IT:

These are common workplace chunks (short expressions). Use them as complete expressions:

- "Stop."
- "Keep clear of …"
- "Wear …"
- "Report it to the supervisor."

They are short because the listener needs to understand the warning quickly.

PAIR WORK - TWO-PART WARNING:

Student A chooses a hazard. Student B gives two short warnings: first, get the person's attention; then, say what to do (action).

Example: "Stop. Keep clear of the sharp edge."

Change roles.

KNOWLEDGE CHECK

Which warning is clearer? Circle A or B.

1) A. Be careful. B. Stop. Keep clear of the cable.

2) A. Something is wrong. B. Do not use the machine. The guard is missing.

3) A. Wear something. B. You must wear safety glasses.

TAKEAWAY

WARNING FORMULA:

1. Get attention → 2. Point out/name the hazard → 3. Say what to do or not do → 4. Give the next action if needed.

11 Your Shift Challenge

PAIR WORK

In pairs, choose three hazard cards. Look at the hazard and the safety cue on each card. Give a clear warning to your partner using only the information on the card. Do not add or invent a safety action. Your partner identifies the hazard and says what to do next. Then, change roles. Share your warnings with another pair.

Task element	Lesson 4 requirement
Skill	Speaking - three short workplace warnings
Student role	You are a trainee mechatronics technician during a simulated workshop walk-through
Audience	A co-worker or another trainee
Trigger/problem	You see one of these hazards: trailing cable, sharp edge, obstructed walkway, missing guard, rotating part, or spill
Purpose	Warn immediately and communicate the safe or prohibited action shown on the hazard card
Information to include	Attention word + hazard/condition + safe or prohibited action from the card + next action shown on the card, if needed
Output conditions	Prepare for 2 minutes. In pairs, give 3 warnings. Then join another pair: one student is the observer and uses the checklist. Change roles
Success evidence	Three clear warnings; correct hazard; correct action from the card; no added, changed or reversed safety information; intelligible stress/intonation

Hazard cards - choose three

Your Communication Toolkit

Communicative move	Useful chunks/sentence frames
Get attention	Stop. / Wait. / Please stop there.
Point out the hazard	There is a cable here. / The guard is missing. / The part is rotating.
Say what not to do	Do not touch it. / Do not step on it. / Do not use the machine.
Say what to do	Keep clear. / Stay behind the line. / Move around the spill.
State PPE	You must wear safety glasses.
Report / next step	Report it to the supervisor. / Tell the technician.
Check the listener	Are you clear? / Is the area clear?

OBSERVER CHECKLIST

Check	Yes	Not yet
Gets attention clearly	☐	☐
Identifies the correct hazard	☐	☐
Gives the approved action/prohibition from the card	☐	☐
Does not add, change or reverse safety information	☐	☐
Gives the next action when required	☐	☐
Warning is clear and intelligible	☐	☐

12 Now I Can!

☐ I can point out a hazard using "There is / There are".

☐ I can warn others by using words/phrases like "Stop" or "Keep clear" clearly.

☐ I can tell a colleague what not to do using "Do not ...".

☐ I can use must / must not for a required or prohibited action.

☐ I can give three short workplace warnings with clear pronunciation.

13 Look Back, Level Up

1. Which warning phrase was easiest for you to use?

2. Which word was hardest to pronounce clearly: must, mustn't, clear, sharp, or report?

3. Did your partner understand your warning the first time? Why / why not?

4. How can you make a warning clear without using a long sentence?

14 Before You Clock Out

STUDENT PROMPT

Your partner is about to use a training rig (a machine for practice). The guard is missing (the safety cover is not there).
Give one short warning. Say what the problem is and what your partner must not do.

15 Job-Site Word Bank

English word/ chunk	English meaning	Arabic equivalent	See It on the Job
sharp edge	edge that can cut	حافة حادة	Keep clear of the sharp edge.
cable	wire for electricity or signals	كابل / سلك	There is a cable across the floor.
walkway	marked path for people	ممر للمشاة	Keep the walkway clear.
guard	protective barrier on a machine	واقي / حاجز حماية	The guard is missing.
spill	liquid on the floor by accident	انسكاب / سائل مسكوب	Keep clear of the spill.

English word/ chunk	English meaning	Arabic equivalent	See It on the Job
rotating part	machine part that turns	جزء دوّار	Do not touch the rotating part.
machine	equipment used to do work	آلة / ماكينة	Do not use the machine.
clear	free from people or objects	خالٍ / واضح	Keep the area clear.
loose	not fixed or tight	غير مثبت / مرتخٍ	The cable is loose.
missing	not there	مفقود / غير موجود	The guard is missing.
wear	have PPE/clothing on your body	يرتدي	Wear safety glasses.
report	tell the responsible person about a problem	يُبلّغ / يبلغ عن	Report the hazard.
supervisor	person who oversees the work	المشرف	Report it to the supervisor.
keep clear	stay away from the hazard	ابتعد / ابقَ بعيدًا	Keep clear of the rotating part.

LESSON 5

GET THE DETAILS RIGHT: LISTEN FOR CRITICAL EQUIPMENT INFORMATION

Skill focus: Listening

1 Introduction to the lesson

Hear and record exact equipment details: codes, numbers, units, and locations. Do not guess when one detail is different.

Mechatronics technicians often work with codes, terminal numbers, sensor gaps, voltage readings and equipment locations. One wrong digit can point to a different terminal, part, or setting. In this lesson, you will listen to a routine equipment check and practise hearing the exact letters, numbers, units, and locations you need to record. The goal is simple: listen carefully, record exactly, and never guess.

EQUIPMENT DETAIL CHECK CARD

Training Cell / Machine: M-04 Date: __/__/__ Technician: _____

Supervisor: _____ Check No.: _____

ITEM	DETAIL TO RECORD	RECORD (Listen and write exactly)	UNIT	LOCATION / NOTES
1. Drive controller	Model or code		—	
2. Drive controller	Serial or part number		—	
3. I/O terminal block	Terminal number		—	
4. Inductive sensor	Sensor gap		mm	
5. DC supply	Voltage reading		V	
6. Replacement sensor	Part number		—	
7. Spare sensor	Location		—	

☐ CHECK BEFORE YOU LEAVE THE AREA: I have checked my card. All details are complete and exact.

Technician signature: _____

2 Communication Goals (ILOs)

By the end of the lesson, you will be able to:

- recognise critical numbers, letters, units and equipment locations in a short workplace exchange.
- distinguish similar-sounding numbers such as thirteen / thirty, fourteen / forty and fifteen / fifty.
- identify a model or part code, a terminal number, a sensor gap and a voltage value.
- recognise clear stress in -teen / -ty numbers, decimals and letter-number codes.

Main Communication Outcome

Recognise and distinguish critical numbers, letters, units and locations in a short Mechatronics workplace exchange.

3 Start-Up Check

PAIR WORK

Work with a partner. Read each pair. Say which detail could cause a different equipment check if you hear it wrong.

A	B	What is different?
terminal 13	terminal 30	
panel B	panel D	
3.0 mm	30 mm	
rear left	rear right	

GROUP SHARE

Join another pair. Choose one example. Why is the exact detail important?

Use simple English: "It is a different terminal/panel/value/location."

4 Pre-listening vocabulary and pronunciation

4.1 Vocabulary

Every vocabulary item has a visual cue. Look at the picture first. Then, read the meaning and example with a partner.

Word/chunk	Meaning	Visual cue	Example
model	the name or code for a type of machine or equipment		Model SMS-F1 is on the nameplate.
serial number	a unique number for one piece of equipment		Record the serial number exactly.
part number	a code used to identify a component		The sensor part number is PS-315.
terminal	a connection point for wires		Check terminal 14 on the terminal block.

Word/chunk	Meaning	Visual cue	Example
sensor gap	the distance between a sensor and its target		The sensor gap is 3.0 millimetres.
setting	the selected position or number on a device		Check the switch setting before the test.
reading	the number shown by a meter or display		The voltage reading is 24 volts.
value	a measured number		Record the value in the check card.
millimetre (mm)	a small unit of length		The gap is three millimetres.
volt (V)	a unit used for electrical voltage		The supply is twenty-four volts.
panel	an area or cabinet with controls or components		The terminal is in panel C.
rear	the back part of something		The cable is at the rear of the panel.
left	the side opposite right		Check the left side of the panel.
right	the side opposite left		The sensor is on the right side.

PAIR WORK - PICTURE QUICK-FIRE:

Student A points to a visual. Student B says the word or chunk. Change roles after seven items.

KNOWLEDGE CHECK - Vocabulary

Complete:

1. serial .....
2. sensor .....
3. voltage .....
4. rear .....
5. part .....

4.2 Hear the number exactly

SOUND CHECK- Pronunciation

NOTICE IT:

For the numbers ending in -teen, the strong beat is usually near the end: thirTEEN, fourTEEN, fifTEEN.

For -ty numbers, the strong beat is near the beginning: THIRty, FORty, FIFty. Listen for the strong beat.

Listen for	Example	What to notice
-teen / -ty	thirTEEN / THIRty	stress changes
decimal	3.0 = three point zero	say each digit after the point
code	MX-240B	say letters clearly; digits may be read one by one
unit	24 V = twenty-four volts	hear number + unit together

PAIR WORK - HEAR THE DIFFERENCE:

Student A reads one item. Student B points to the word heard. Then, change roles.

A: 13 / 30 B: 14 / 40

C: 15 / 50 D: 3.0 / 30

E: MX-240B / MX-240D

KNOWLEDGE CHECK - Pronunciation

Listen to your teacher and write what you hear.

1. 13 or 30? .....
2. 14 or 40? .....
3. 15 or 50? .....
4. 3.0 or 30? .....
5. MX-240B or MX-240D? .....

5 Before you listen

GROUP WORK

Work in groups of three. Look at pictures A–E. Match each picture with one type of information from the word bank below.

A

_____

B

_____

C

_____

D

_____

E

_____

WORD BANK :

Choose from:

model / serial number • terminal number • sensor gap + unit • voltage + unit • equipment location

LISTENING TIP:

On the first listen, do not write every word. Listen for the type of detail. On the second listen, write the exact letters, numbers, unit, and location.

6 Listening

Audio 5.1 - Routine equipment verification: Training Cell M-04

You will listen to an audio about a supervisor checking equipment details with a trainee technician.

Language in Context

Language element	Example from the listening	What it helps the technician understand
Equipment code	MX-240B / PS-315	which exact model or part is meant
Number + unit	3.0 millimetres / 24 volts	the measured value and its unit
Critical number contrast	terminal fourteen; one-four, not four-zero	which connection point is meant
Location phrase	at the rear left of panel C	where the item is located

7 Message Check

7.1 Listen again and write T for True or F for False:

1. The model is MX-240D. True ☐ False ☐

2. The terminal number is 14. True ☐ False ☐

3. The sensor gap is 3.0 millimetres. True ☐ False ☐

4. The DC supply reading is 24 volts. True ☐ False ☐

5. The spare sensor is at the rear right of panel C. True ☐ False ☐

7.2 Listen and number the information types in the order you hear them. Write from 1-7.

Information type	Order
Serial number	
Model	
Part number	
Equipment location	
Voltage reading	
Terminal number	
Sensor gap	

7.3 Listen again. Complete the Equipment Detail Check Card with the exact information you hear. Write all letters, numbers, units, and locations carefully. Do not guess.

EQUIPMENT DETAIL CHECK CARD

Training Cell: .....

Equipment/ Component	Details to record	What you heard
Drive controller	Model	_____
Drive controller	Serial number	_____
I/O terminal block	Terminal number	_____
Inductive sensor	Sensor gap	_____
DC supply	Voltage reading	_____
Replacement sensor	Part number	_____
Spare sensor	Locations	_____

7.4 Answer the questions. Then, compare your answers with a partner:

1. Which two details contain letters and numbers? .....

2. Which detail has a decimal? .....

3. Which detail tells you where to find the spare sensor? .....

4. Why does the supervisor say "one-four, not four-zero"? .....

8 Think It Through

GROUP WORK

Work in groups of three, discuss the questions below, and give short answers:

1. Which detail was hardest to hear: the model, serial number, terminal, gap, voltage, or location? Why?
2. What can happen if terminal 14 is recorded as terminal 40?
3. Why is a unit important after a number? Compare "3.0" and "3.0 millimetres".
4. Which is clearer for an equipment code: saying the digits quickly or one by one?

9 DID YOU KNOW?

In technical records, SI unit symbols do not take a plural "s". Write 24 V and 3.0 mm - not 24 Vs or 3.0 mms. When you speak, however, you say "twenty-four volts" and "three point zero millimetres". This small difference helps technical information stay clear and standard.

Source: Bureau International des Poids et Mesures (BIPM), SI Brochure, section 5: Writing unit symbols and names.

10 Build the Message - Language focus

The language in this lesson helps you record exactly what you hear. Notice the pattern first. Then, practise it with a partner. Complete the Knowledge Check before you move on.

10.1 Number + unit

NOTICE IT

A measured value usually has two parts: NUMBER + UNIT. The unit tells you what the number means. Say a decimal with "point" and say each digit after the point.

Examples:

3.0 mm = three point zero millimetres

24 V = twenty-four volts

PAIR WORK - SAY AND WRITE:

Student A reads a value aloud. Student B writes it down. Then, change roles.

3.0 mm • 2.5 mm • 24 V • 12 V • 4.0 mm

KNOWLEDGE CHECK

Choose the complete technical detail.

1. 3.0 / 3.0 mm .....
2. 24 / 24 V .....
3. 2.5 mm / 2.5 .....

10.2 Letter-number equipment codes

NOTICE IT

Equipment models and parts often use letters + numbers. Listen to each character. A dash separates parts of the code. For identification codes, reading digits one by one can make the code easier to check.

Example:

MX-240B = M-X dash two-four-zero B

PS-315 = P-S dash three-one-five

PAIR WORK - CODE CALL-OUT:

Work in pairs. Student A chooses a code and reads it. Student B writes it. Change roles.

MX-240B • PS-315 • QF-14 • SR-50

KNOWLEDGE CHECK

Write the code you hear from your teacher.

1. .....
2. .....
3. .....

10.3 Location phrases

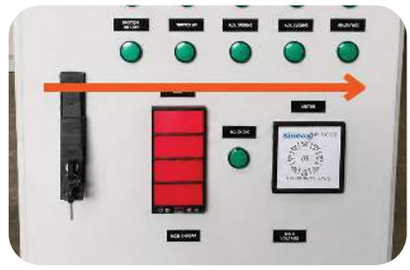

NOTICE IT

Use simple location words to find the correct place.

rear = back • left / right = side • at the rear of panel C • on the left of the panel • rear left of panel.

LEFT

RIGHT

PAIR WORK - POINT TO THE LOCATION: Student A says a location. Student B points to the correct side in the picture. Change roles.

left • right • rear • rear left • rear right

KNOWLEDGE CHECK

Complete with left, right, or rear.

1. The spare is at the ..... of the panel. (back)

2. The sensor is on the..... side. (opposite right)

3. The connector is on the ..... side. (opposite left)

11 Your Shift Challenge

Skill	Writing from spoken information
Product	Completed Equipment Detail Check Card
Student role	You are a trainee Mechatronics technician recording equipment details during a routine equipment check
Audience	Your supervisor and the workshop record
Workplace setting	A controlled training rig/control panel inspection
Trigger/problem	Your supervisor gives you important equipment information. You need to record the details exactly
Purpose	Record the correct equipment information without guessing
Information to include	Model/code • serial number • terminal number • sensor gap + unit • voltage + unit • part number • location
Task input	Your teacher will read or play a new equipment call-out twice
Output conditions	Listen carefully and complete the card individually. You have 5 minutes. Then, compare your card with a partner for 3 minutes

SUCCESS EVIDENCE

You are successful when:

every letter and number is correct; each measured value includes the correct unit; the equipment location is clear; all required fields are completed; no information is guessed.

Your Communication Toolkit

What you need to record	Useful form/phrase
Equipment identity	Model: _____ / Serial no.: _____
Connection point	Terminal no.: _____
Measured gap	Sensor gap: _____ mm
Electrical value	Voltage: _____ V
Part identity	Part no.: _____
Location	Location: _____

YOUR EQUIPMENT DETAIL CHECK CARD

Field	Your record
Model/code	_____
Serial number	_____
Terminal number	_____
Sensor gap	_____
Voltage	_____
Part number	_____
Location	_____

12 Now I Can!

☐ I can identify and record a terminal number.
☐ I can recognise letters and numbers in a model or part code.
☐ I can identify a decimal value and its unit.
☐ I can distinguish thirteen / thirty, fourteen / forty and fifteen / fifty.
☐ I can understand simple equipment locations such as rear left and panel C.

13 Look Back, Level Up

1. Which type of detail was easiest for you to hear? Why?

.....

2. Which number pair was hardest: 13/30, 14/40, or 15/50?

.....

3. Did the unit of measurement help you understand the value? Give one example.

.....

4. What will you do next time when you hear a long equipment code?

.....

14 Before You Clock Out

Student prompt

Listen once and write the exact information: "Model MX-200. Terminal thirty. Sensor gap two point five millimetres. Panel B, rear right."

15 Job-Site Word Bank

English word/chunk	English meaning	Arabic equivalent	See It on the Job
Model	The name or code for a type of machine or equipment	طراز / موديل	Model MX-240B is on the nameplate.
Serial number	A unique number for one piece of equipment	الرقم التسلسلي	Record the serial number exactly.
Part number	A code used to identify a component	رقم الجزء	The sensor part number is PS-315.
Terminal	A connection point for wires	طرف توصيل / نقطة توصيل	Check terminal 14 on the terminal block.
Sensor gap	The distance between a sensor and its target	المسافة بين المستشعر والهدف	The sensor gap is 3.0 millimetres.

English word/chunk	English meaning	Arabic equivalent	See It on the Job
Setting	The selected position or number on a device	ضبط / إعداد	Check the switch setting before the test.
Reading	The number shown by a meter or display	قراءة	The voltage reading is 24 volts.
Value	A measured number	قيمة	Record the value in the check card.
Millimetre (mm)	A small unit of length	مليمتر	The gap is three millimetres.
Volt (V)	A unit used for electrical voltage	فولت	The supply is twenty-four volts.
Panel	An area or cabinet with controls or components	لوحة / لوحة تحكم	The terminal is in panel C.
Rear	The back part of something	الخلف / الجزء الخلفي	The cable is at the rear of the panel.
Left	The side opposite right	يسار	Check the left side of the panel.
Right	The side opposite left	يمين	The sensor is on the right side.

LESSON 6

SAY IT BACK, CHECK IT TWICE: CLARIFY CRITICAL DETAILS

Skill focus: Speaking

1 Introduction to the lesson

Ask, check, read back, and confirm critical Mechatronics details before you record or act.

In Mechatronics work, one unclear letter, number, value or location can point to the wrong item. A technician should not guess. In this lesson, you will practise a simple closed-loop routine: ask when a detail is unclear, say the detail back, and wait for confirmation. You will use this routine with model numbers, serial numbers, terminals, values, and locations before recording or acting.

2 Communication Goals (ILOs)

By the end of the lesson, you will be able to:

- ask for repetition when a number, letter, value, or location is unclear.
- use Do you mean...? / Is that...? / Is it ... or ...? to check one critical detail.
- read back critical equipment information in a clear, controlled order.
- ask for and give confirmation before information is recorded or used.
- say critical numbers and letter-number codes clearly, with stress on the detail being checked.

Main Communication Outcome

Use repetition, clarification, read-back and confirmation strategies to check safety-critical numbers, letters, values and locations accurately.

3 Start-Up Check

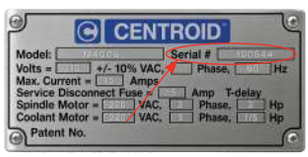

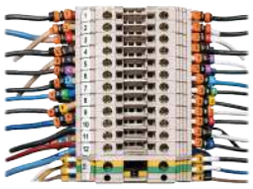

PAIR WORK: Read each situation. The information is not clear. Do not guess. Write one question to check the information. Then, take turns asking and answering your questions.

Situation	Your question
You hear terminal 13 or 30.	Example: Do you mean terminal 13?
The label says MX-200, but the paper says MX-200A.	.....
You hear 24 volts, but you are not sure.	.....
You hear rear left or rear right.	.....

4 Pre-listening vocabulary and pronunciation

4.1 Vocabulary

Look at every visual first. With a partner, say what you think the word means. Then, read the meaning and example.

Word/chunk	Simple meaning	Visual cue	Example
1. model	the code for a type of machine or equipment		The model is MX-200.
2. serial number	a unique number for one item of equipment		Read the serial number back.
3. terminal	a connection point for wires		Do you mean terminal thirteen?
4. gap	the space between two things		The sensor gap is 3.0 millimetres.

Word/chunk	Simple meaning	Visual cue	Example
5. voltage	an electrical value measured in volts		Confirmed: twenty-four volts.
6. value	a measured number or setting		Please repeat the value.
7. location	the place where something is		Can you confirm the location?
8. correct	right; accurate		Yes, that is correct.
9. different	not exactly alike		MX-200 and MX-200A are different.
10. same	exactly alike		The two codes are the same.

PAIR WORK - VISUAL QUICK-FIRE:

Student A points to a visual. Student B says the word or chunk. Change roles after six items.

KNOWLEDGE CHECK - Vocabulary

Complete:

1. Please repeat the ..... .
2. Can you confirm the ..... ?
3. MX-200 and MX-200A are ..... .
4. The two codes are the ..... .

SOUND CHECK- Make the critical detail easy to hear

NOTICE IT:

When you check a critical detail, stress the word or number that matters. Use a controlled pace for codes. A checking question often rises at the end; a final confirmation usually falls.

- Do you mean terminal **THIRTEEN?** ↗
- Is that **MX-200 or MX-200A?** ↗
- Confirmed: **TWENTY-FOUR volts.** ↘

Target	Model item	Notice
critical number	terminal THIRTEEN	stress the number
critical word	SERIAL number	stress the key word
code	M-X ... two-zero-zero A	use a controlled pace
confirmation	Confirmed: TWENTY-FOUR volts.	clear final fall

PAIR WORK - STRESS THE DETAIL:

Student A reads one line. Student B points to the critical word or number. Then, change roles.

1. Do you mean terminal THIRTEEN?

2. Could you repeat the SERIAL number?

3. Is that MX-200 or MX-200A?

4. Confirmed: TWENTY-FOUR volts.

KNOWLEDGE CHECK - Pronunciation

Your teacher reads each sentence. Underline the word or number with the strongest stress:

1. Do you mean terminal thirteen?

2. Could you repeat the serial number?

3. Is that panel B or panel D?

4. Confirmed: three point zero millimetres.

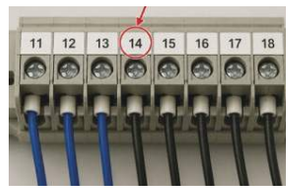

5 Before you Listen

GROUP WORK

Work in groups of three. Look at pictures A–D. Choose the correct phrase from the word bank for each picture. Write the phrase under the picture.

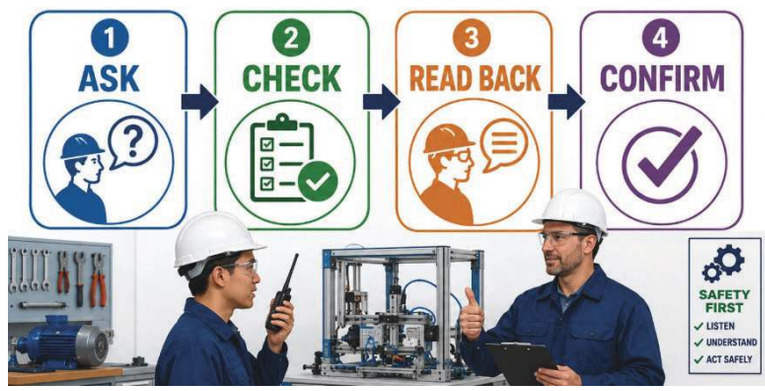

WORD BANK:

• terminal number • sensor gap • equipment location • model mismatch

			
A	B	C	D
.....	.....	.....	.....

LISTENING TIP

Before you listen, remember: the trainee must not guess. Listen for four communication moves.

6 Listening

Audio 6.1 - Equipment verification before recording

A supervisor and trainee are checking the training drive and its service sheet before the trainee records the details.

Listen once. What happens during the equipment check? Choose the best answer.

a. All the equipment information is the same.

b. The trainee finds one difference and reports it.

c. The trainee cannot complete the equipment check.

Language in Context

Communication move	Example from the exchange	What it does
Ask for repetition	Could you repeat the serial number slowly?	gets the detail again
Check two choices	Do you mean terminal thirteen or terminal thirty?	checks which number is correct
Check one detail	Serial number 48216, correct?	asks for confirmation
Read back	I'll read that back: ...	repeats the critical information
Confirm / contrast	Correct. / They are different.	closes the check or identifies a mismatch

7 Message Check

7.1 Listen again. Write T for True or F for False:

1. The machine model is MX-200A. _____

2. The serial number is 48216. _____

3. The trainee first hears terminal 30. _____

4. The sensor gap is 3.0 millimetres. _____

5. The service sheet and the machine label show the same model. _____

7.2 Complete the verified detail card:

Field	Verified detail
Model	_____
Serial number	_____
Terminal	_____
Sensor gap	_____ mm
Voltage	_____ V
Location	_____ of panel B

7.3 Match the phrase to its purpose:

Phrase	Purpose
1. Could you repeat that, please?	a. give confirmation
2. Is that MX-200 or MX-200A?	b. ask for repetition
3. I'll read that back.	c. check two choices
4. Confirmed: 24 volts.	d. read back information

7.4 Short answer

Work with a partner:

1. Why does the trainee ask about terminal 30 / 13? _____
2. What does the trainee do when the service sheet says MX-200A? _____
3. When can the trainee record the details? _____

8 Think It Through

GROUP WORK

Work in groups of three, discuss the following questions, and use short answers with one example from the exchange.

1. Why is "yes" weaker than reading the number back?
2. Which question is better when you hear 13 or 30: "Again?" or "Do you mean 13 or 30?" Why?
3. Why must the trainee stop when MX-200 and MX-200A are different?
4. Which part of a read-back should be spoken slowly?

9 DID YOU KNOW?

Industrial systems often use reference designations - exact labels or codes that identify an object and connect it to information in drawings or documents. IEC 81346 explains that a designation on a component can act like a key to find information about that same object in different documents. This is one reason a changed letter or number should be checked, not guessed.

Source: IEC 81346-1:2022, Industrial systems, installations and equipment and industrial products - Structuring principles and reference designations - Part 1: Basic rules (official IEC publication page).

10 Build the Message - Language focus

Use these patterns to check information before you record or act. First, notice the pattern. Then, practise it with a partner. Complete each Knowledge Check before you move on.

10.1 Ask for repetition

NOTICE IT

If you do not hear a detail clearly, ask the speaker to repeat it.

Use Could you repeat + the detail, please? For a code or long number, you can also ask the speaker to say it slowly.

- Could you repeat the terminal number, please?
- Could you say the serial number slowly?

PAIR WORK - ASK AGAIN

Student A chooses one detail and reads it quickly. Student B asks for the detail again. Change roles.

Use: terminal 13 • serial 48216 • 24 volts • panel B.

For example:

- Student A: "Serial 48216."
- Student B: "Could you repeat the serial number, please?"
- Student A: "Serial 48216."

KNOWLEDGE CHECK

Choose the question you should use:

1. You did not hear the serial number.

a. Serial?

b. Could you repeat the serial number, please?

2. The code is too fast.

a. Could you say the code slowly?

b. Yes.

10.2 Clarify one detail or two choices

NOTICE IT

Use Do you mean...? / Is that...? to check one detail.

- Use Is it X or Y? when two choices sound similar.
- Do you mean terminal thirteen?
- Is that panel B?
- Is it MX-200 or MX-200A?

PAIR WORK - CHECK THE CHOICE

Work in pairs. Student A chooses one item from each pair and says it. Student B asks a clarification question. Then, change roles.

a. 13 / 30

b. panel B / panel D

c. MX-200 / MX-200A

d. rear left/rear right

KNOWLEDGE CHECK

Write the best question.

1. You hear 13 or 30: .....

2. You are not sure about panel B: .....

3. The label and sheet are different: .....

10.3 Read back and confirm

NOTICE IT

A read-back repeats important information to check it. A confirmation says that the information is correct.

Trainee: I'll read that back: terminal 13, 3.0 millimetres, 24 volts.
Supervisor: Correct. / Confirmed.

You can also check one detail by asking: "24 volts, correct?"

PAIR WORK - CLOSE THE LOOP

Work in pairs. Follow these four steps:

1. Student A gives two details.
2. Student B asks one checking question.
3. Student B reads back both details.
4. Student A says "Correct" or "Confirmed."

Then, change roles.

KNOWLEDGE CHECK

Put the steps in order.

☐ read back the details

☐ hear the information

☐ get confirmation

☐ ask about an unclear detail

10.4 Same or different

NOTICE IT

Use "the same" when two details match. Use "different" when two details do not match.

- The model number is the same.
- The machine label and service sheet are different.

GROUP WORK - SAME OR DIFFERENT?

Work in groups of three. Student A reads two codes aloud. Students B and C say SAME or DIFFERENT. Then, explain one difference if there is one: "The last letter is different."

Codes:

a. MX-200 / MX-200

b. MX-200 / MX-200A

c. PS-315 / PS-351

d. B-14 / B-14

11 Your Shift Challenge

Skill	Speaking • Product: closed-loop critical-detail exchange
Student roles	Student A is the supervisor / experienced technician. Student B is the trainee technician.
Workplace setting	Imagine you are in a controlled Mechatronics training cell during an equipment verification check.
Trigger/problem	One critical detail is unclear, and one document detail does not match the equipment label
Purpose	Ask, clarify, read back, and confirm the exact critical information before recording or acting.
Information to include	Model/code • serial number • terminal • one value + unit • location • one mismatch or unclear detail
Output conditions	Prepare for 3 minutes. Speak in pairs for 2 minutes. Student B must ask at least two clarification questions and complete one full read-back. Then, change roles.

SUCCESS EVIDENCE / OBSERVER CHECK

Criterion	Yes	Not yet
Asks at least two specific clarification questions	☐	☐
Checks the unclear critical detail accurately	☐	☐
Reads back model/code, serial, terminal, value + unit and location accurately	☐	☐
Identifies/reports the mismatch correctly	☐	☐
Obtains clear confirmation before recording/acting	☐	☐
Does not change or guess critical information	☐	☐
Critical numbers/codes are intelligible	☐	☐

Scenario Card A - Student A only

Field	Information to give
Model	MX-200
Serial	48216
Terminal	13 - say it once quickly
Sensor gap/voltage	3.0 mm / 24 V
Location	rear left of panel B
Mismatch	Service sheet says MX-200A

Scenario Card B - Student A only after you change roles

Field	Information to give
Model	SR-150B
Serial	63140
Terminal	30 - say it once quickly
Sensor gap/voltage	2.5 mm / 12 V
Location	rear right of panel D
Mismatch	Spare-part card says SR-150D

Your Communication Toolkit

Communicative move	Useful chunks/sentence frames
Ask for repetition	Could you repeat the _____, please? / Could you say it slowly?
Check one detail	Do you mean _____? / Is that _____?
Check two choices	Is it _____ or _____?
Start read-back	I'll read that back: ...
Check during read-back	_____ , correct?
Confirm	Correct. / Confirmed: _____.
Report a mismatch	The two codes are different. I will report the mismatch before using the document.

12 Now I Can!

☐ I can ask someone to repeat a critical detail.

☐ I can ask if a number or code means one thing or another.

☐ I can read back a model, terminal, value, and location.

☐ I can say "correct" or "confirmed" to close the communication loop.

☐ I can identify when two codes are the same or different.

13 Look Back, Level Up

1. Which clarification phrase was easiest for you to use?

2. Which detail was hardest to say clearly: a code, number, value, or location?

3. How did the read-back help you catch a difference?

4. What will you say next time you are not 100% sure about a critical detail?

14 Before You Clock Out

Student prompt

Your teacher says: "Model MX-200A, terminal thirty, 24 volts, rear left of panel B." You are unsure about the model and terminal. Ask one clarification question, then read back all the information and ask for confirmation.

15 Job-Site Word Bank

English word/chunk	English meaning	Arabic equivalent	See It on the Job
confirm	say that information is correct	يؤكد	Please confirm the voltage.
repeat	say the information again	يكرر / يعيد	Could you repeat the terminal number?
slowly	at a controlled, not fast, speed	ببطء	Could you say the serial number slowly?
model	the code for a type of machine or equipment	طراز / موديل	The model is MX-200.
serial number	a unique number for one item of equipment	الرقم التسلسلي	Read the serial number back.
terminal	a connection point for wires	طرف توصيل / نقطة توصيل	Do you mean terminal thirteen?
gap	the space between two things	فجوة / مسافة	The sensor gap is 3.0 millimetres.
voltage	an electrical value measured in volts	الجهد الكهربائي	Confirmed: twenty-four volts.
value	a measured number or setting	قيمة	Please repeat the value.
location	the place where something is	الموقع	Can you confirm the location?
correct	right; accurate	صحيح / دقيق	Yes, that is correct.
different	not the same	مختلف	MX-200 and MX-200A are different.
same	not different; exactly alike	نفسه / متطابق	The two codes are the same.

LESSON 7

CHECK BEFORE USE: READ A TECHNICIAN'S INSPECTION CHECKLIST

Skill focus: Reading

1 Introduction to the lesson

Before a Mechatronics technician uses a machine, a short inspection checklist helps them look at the same important items every time. The English on a checklist is usually short: Guard fitted? Cable secure? Label readable? In this lesson, you will learn how to find the item, understand the expected condition, and read Pass, Fail, and Action required correctly. You will use this skill in Lesson 8 when you complete a pre-use record.

2 Communication Goals (ILOs)

By the end of the lesson, you will be able to:

- locate the inspection item and expected condition in a simple pre-use checklist.
- recognise Pass, Fail and Action required in a checklist response field.
- match a simple equipment observation to the correct checklist item.
- tell a partner the status using a short phrase such as "Cable: Fail."

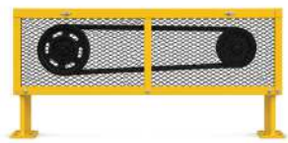

3 Start-Up Check

GROUP WORK

- Look at the four photos. Student A chooses a photo. Student B describes it using one condition word from the list: **present, loose, readable, clear**. Change roles.

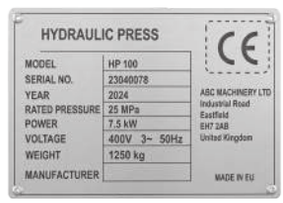

A. Condition

_____

B. Condition

_____

C. Condition

_____

D. Condition

_____

- **Then discuss: Which item would you check first before a machine starts? Why?**

4 Pre-reading vocabulary and pronunciation

4.1 Vocabulary

Look at each picture. Take turns telling your partner what you see. Then, read the meaning and example and complete the Knowledge Check below:

Word / chunk	Meaning	Visual cue	Example
fitted	put in the correct place		The sensor is fitted correctly.
present	there; not missing		The emergency stop is present.
secure	firmly fixed; not loose		The guard is secure.

Word / chunk	Meaning	Visual cue	Example
loose	not firmly fixed; can move or come off		The cable is loose.
damaged	broken or not in good condition		The cable is damaged.
missing	not there when it should be		The guard is missing.
clean	with a clear surface; with no dust or oil on it		The control panel is clean.
dirty	with unwanted material on the surface		The area is dirty.
obstructed	blocked by something		The route is obstructed.
clear	open and easy to use or walk through		The access route is clear.
readable	clear enough to read		The safety label is readable.
defect	a fault or problem		There is a visible defect.
pass	the item meets the expected condition		The equipment passes the check. (Verb) The equipment check is a pass. (Noun)

Word / chunk	Meaning	Visual cue	Example
fail	the item does not meet the expected condition		Cable: Fail.
action required	something must be done before normal use		Action required: report before use.

KNOWLEDGE CHECK - Vocabulary

Complete each sentence with a word from the box:

Pass – missing - action required – readable - loose

1. The guard is not there. It is ..... .
2. The label is clear. It is ..... .
3. The cable is not secure. It is ..... .
4. The item is safe: ..... .
5. A problem must be reported: ..... .

SOUND CHECK - Make condition words easy to hear

NOTICE IT

When you say the checklist words, pay attention to two things: the final -s sound and word stress.

Some checklist words end in -s, such as guards, cables, and labels. The final -s is pronounced /z/. Make sure you say the /z/ sound. Do not leave out or remove the final /z/ sound when speaking.

Also, notice the stressed syllable in longer words: e-MER-gen-cy and sat-is-FAC-tor-y.

Pronunciation feature	Words	Say it
Plural endings	guards • cables • labels	Check the guards. / Are the cables secure? / The labels are readable.
Word stress	emergency	e-MER-gen-cy stop
Word stress	satisfactory	sat-is-FAC-tor-y condition

PAIR PRACTICE:

Student A reads one line slowly. Student B points to the final -s sound or the stressed syllable. Change roles. Then, read the full sentence together.

a. Check the guards.

b. Check the equipment.

c. This area is dangerous.

KNOWLEDGE CHECK - Pronunciation

Circle the stronger syllable:

1. EM / MER / GEN / CY

2. SAT / IS / FAC / TOR / Y.

Then, underline the final sound you must hear in: guards, cables, labels.

5 Before You Read

Pair Work

Look at photos A–H. What does each photo show? Choose the correct checklist item from the box. Write the item number under each photo.

A _____

B _____

C _____

D _____

E _____

F _____

G _____

H _____

Checklist Items

1. PPE	**3.** Safety Label	**5.** Visible Condition	**7.** Cable
2. Sensor	**4.** Guard	**6.** Emergency Stop	**8.** Access Route

6 Reading

WORKPLACE GENRE

PRE-USE INSPECTION CHECKLIST - Training Rig MR-07.

Read each row from left to right: what to check → what should be true → response → what to do if there is a problem. A technician reads the whole row, not just the response. The checklist shows what to check, what condition is expected, how to respond, and what to do if the condition is not met.

No.	Inspection item	Expected condition	Response	If the condition is not met
1	Guard	Fitted, present, and secure	Pass / Fail	Do not use. Report the missing or loose guard.
2	Power/control cable	Secure; no visible damage	Pass / Fail	Report a loose or damaged cable before use.
3	Emergency stop	Fitted, present and accessible	Pass / Fail	Do not start. Report immediately.
4	Safety label	Present and readable	Pass / Action required	Report a missing or unreadable label.
5	Access route	Clear; not obstructed	Pass / Action required	Keep the route clear. Report if you cannot correct it safely.
6	Sensor face	Clean; not obstructed	Pass / Action required	Clean only if authorised; otherwise report.
7	Required PPE	Available for the task	Pass / Fail	Do not start without required PPE. Report.
8	General visible condition	No obvious defect	Pass / Fail	Stop and report any visible defect before use.

Language in Context

Language element	Example from the checklist	What it helps the technician understand
be + condition adjective	The guard is fitted. / The cable is loose.	the current condition of an item
there is / there are	There is a visible defect.	that a problem or item exists
have/has	The panel has a readable label.	what an item or machine contains
status language	Pass / Fail / Action required	the inspection decision and next step

7 Message Check

7.1 Match each inspection item with its expected condition. Work alone first, then check with a partner:

Inspection item	Expected condition
1. Guard	a. clear and not obstructed
2. Safety label	b. fitted, present and secure
3. Access route	c. present and readable
4. Sensor face	d. clean and not obstructed

Answers: 1. ..... 2. ..... 3. ..... 4. .....

7.2 True or False?

1. A loose guard can be marked Pass. .....
2. A readable safety label meets the expected condition. .....
3. A blocked access route may need action before normal use. .....
4. The technician should start the machine if required PPE is missing. .....
5. A visible defect must be reported before use. .....

7.3 Complete the sentences. Use one or two words from the checklist:

Item	What the checklist says
Cable	The cable must be ..... and has no visible damage.
Emergency stop	It must be fitted, present and .....
Safety label	It must be present and .....
Sensor face	It must be clean and not .....

7.4 Short answer. Work with a partner.

1. Which three items say "Do not start" or "Do not use"? .....
2. What response can you use when a label is unreadable? .....
3. What should you do when you see an obvious defect? .....

8 Think It Through

GROUP WORK

Work in groups of three. Read each situation. Choose Pass, Fail or Action required. Give one short reason from the checklist.

Situation	Your decision	Reason
The guard is present but loose.	.....	.....
The label is present, but you cannot read it.	.....	.....
The access route is clear.	.....	.....
Required safety glasses are not available.	.....	.....

9 DID YOU KNOW?

Inspection status does not always live only on paper. HSE guidance notes that, for smaller work equipment, a workplace may use a tag, color code or label as physical evidence that an inspection is current. That means a technician may need to read both the equipment and its inspection record before use.

Source: UK Health and Safety Executive (HSE), Safe use of work equipment (PUWER), guidance on inspection records and physical evidence of inspection.

Discuss: Why is "looks OK" weaker than a checklist condition such as "guard fitted, present and secure"?

10 Build the Message - Language focus

The language in a checklist is short because technicians need to find the condition quickly. Notice the pattern, practise it, then complete the Knowledge Check.

10.1 Describe condition: be + adjective

NOTICE IT

Use is/are + a condition word.

Examples:

- The guard is fitted.
- The cables are secure.
- The label is readable.
- The route is clear.

PAIR PRACTICE

Student A chooses an item. Student B completes the sentence.

Example: "Cable" → "The cable is secure."

Change roles after four items.

KNOWLEDGE CHECK

Choose is or are:

1. The guard ..... fitted.
2. The cables ..... secure.
3. The labels ..... readable.
4. The route ..... clear.

10.2 Point out a problem: There is / There are

NOTICE IT

Use There is + one thing.

Use There are + more than one.

Examples:

There is a loose cable.

There are two missing labels.

PAIR PRACTICE

Student A chooses an item. Student B completes the sentence.

Example:

"Cable" → "The cable is secure."

Change roles after four items.

KNOWLEDGE CHECK

Complete:

1. ..... a visible defect.
2. ..... two loose cables.
3. ..... an unreadable label.

10.3 Show what equipment has: have/has

NOTICE IT

Use **has** with one machine/item: The panel **has** a readable label.

Use **have** with plural items: The guards **have** secure fixings.

PAIR PRACTICE

Student A says a machine or item. Student B makes a has/have sentence. Keep the sentence short.

KNOWLEDGE CHECK

Choose the correct word: has or have:

1. The panel ..... a label.

2. The cables ..... no visible damage.

3. The machine ..... an emergency stop.

10.4 Read status labels: Pass / Fail / Action required

NOTICE IT

Pass = the expected condition is met.

Fail = the expected condition is not met and use should not continue.

Action required = something needs attention before normal use.

GROUP PRACTICE

In groups of three, one student reads an observation, one chooses the status, and one finds the action note in the checklist. Rotate roles.

KNOWLEDGE CHECK

Write Pass, Fail, or Action required:

1. Guard fitted and secure: .....

2. Required PPE missing: .....

3. Label unreadable: .....

11 Your Shift Challenge

READ • DECIDE • TELL YOUR PARTNER: This is a reading-led task that prepares you for Lesson 8.

Do not write a full inspection record yet.

Task	What to do
Skill	Speaking: give a short checklist status report.
Student role	You are a trainee Mechatronics technician carrying out a pre-use check.
Audience	A partner/trainee on the same workshop check
Setting	Training Rig MR-07 before use
Trigger	You receive four observation cards and a Pre-use Checklist showing the expected condition for each item.
Purpose	Read the observation, compare it with the expected condition, decide Pass or Fail, and report the result.
Information to include	Inspection item • observed condition • Pass/Fail status • action required if the item fails
Output conditions	Pair work. Prepare for 2 minutes. Student A reports Cards A and B while Student B checks the decisions against the checklist. Then, change roles for Cards C and D.
Success evidence	You find the correct checklist row, identify the condition correctly, give the correct Pass/Fail decision, and state the correct action when needed. You use only the observation card and checklist information and do not guess.

PRE-USE CHECKLIST

Inspection item	Expected condition	If the condition is not met
Guard	fitted and secure	FAIL — Do not use. Report it.
Emergency stop	present and easy to reach	FAIL — Do not use. Report it.
Safety label	present and readable	FAIL — Report it before use.
Access route	clear	FAIL — Clear the route before use.

Observation cards

Card	Observation
A	The guard is fitted, but one bolt is loose.
B	The emergency stop is present and easy to reach.
C	The safety label is dirty and cannot be read.
D	The access route is clear and open.

Model: Card A

"Guard: Fail. One bolt is loose. Do not use the machine. Report it."

Your Communication Toolkit

What you need to do	Useful language
Name the item	Guard / Emergency stop / Safety label / Access route
Say the condition	It is fitted / It is loose / It is readable / It is clear
Give the status	Pass / Fail
Give the action required	Do not use / Report it / Report it before use / Clear the route before use
Check your partner	Which checklist row? / What is the expected condition? / Pass or fail? / What action is required?

SUCCESS EVIDENCE

You are successful when you:

- find the correct checklist row;
- compare the observation with the expected condition;
- give the correct Pass/Fail decision;
- give the correct action required when an item fails;
- give a short, clear status report;
- use only the information in the observation card and checklist — do not guess.

12 Now I Can!

☐ I can identify the inspection item in a short checklist.

☐ I can identify the expected condition for an item.

☐ I can understand Pass, Fail, and Action required.

☐ I can understand simple condition words such as secure, loose, readable and obstructed.

☐ I can describe the checklist status and next action in a short phrase.

13 Look Back, Level Up

1. Which condition word was easiest to understand? Why?

2. Which checklist row was hardest to read?

3. How does the "expected condition" help you decide Pass or Fail?

4. What will you do if a checklist word or status is unclear?

14 Before You Clock Out

STUDENT PROMPT

Read this line: "Safety label - present and readable - Pass / Action required."

Observation: The label is present, but the words cannot be read. Say the correct status and next action.

15 Job-Site Word Bank

English word/chunk	English meaning	Arabic equivalent	See It on the Job
fitted	put correctly in place	مُثبّت / مُركّب	The guard is fitted.
present	there; not missing	موجود	The emergency stop is present.
secure	firmly fixed	مُحكم / ثابت	The cable is secure.
loose	not firmly fixed	غيرمُحكم / مرتخٍ	The cable is loose.
damaged	broken or in poor condition	تالف / متضرر	The cable is damaged.
missing	not present	مفقود / غيرموجود	The guard is missing.
clean	not dirty	نظيف	The sensor is clean.
dirty	not clean	متسخ	The area is dirty.
clear	not blocked	خالي / واضح	The access route is clear.
obstructed	blocked	مُعاق / مسدود	The route is obstructed.
readable	easy to read	مقروء / واضح للقراءة	The label is readable.
defect	fault or problem	عيب / خلل	There is a visible defect.
pass	condition is acceptable	اجتاز / مقبول	Guard: Pass.
fail	condition is not acceptable	غيرمجتاز / غيرمقبول	Cable: Fail.
action required	something must be done	إجراء مطلوب	Action required: report before use.

LESSON 8

RECORD IT CLEARLY: WRITE THE PRE-USE SAFETY CHECK

Skill focus: Writing

1 Introduction to the lesson

A pre-use safety record must be quick to read and clear for the next person.

Technicians often write short factual comments such as "Cable: loose" or "Guard: not fitted" instead of long sentences.

In this lesson, you will read a model inspection record, notice how short workplace comments are written, and then complete your own eight-item record for a simulated Mechatronics training rig.

2 Communication Goals (ILOs)

By the end of the lesson, you will be able to:

- record the condition of an inspection item using a short factual comment.
- mark Pass or Fail correctly from information that is given.
- write a brief action-required note when an item prevents normal use.
- use a model checklist to find the expected wording and status field.

3 Start-Up Check

PAIR WORK: Read each pair. Choose the better inspection comment: A or B. Tell your partner why. Keep your answer short.

A	B
The cable is a little bit not good.	Cable: loose.
Guard: not fitted.	Maybe the guard has a problem.
The button is okay, I think.	Emergency stop: pass.
Action required: report before use.	Something must happen with the label.

NOTICE

Good records are factual. Name the item and condition. Avoid vague words: maybe, bad, I think.

4 Pre-reading vocabulary

4.1 Vocabulary

The table shows words for things you can see and touch. These are called concrete words. You have seen these words before. Which ones do you know? Student A says the meaning and Student B guesses the word/phrase.

Word	Meaning	Visual cue	Example
guard	a cover that protects people from moving machine parts		Check the guard.
cable	a wire or group of wires that carries power or signals		Check the cable.
emergency stop	a control used to stop a machine quickly		Check the emergency stop.
label	information fixed to equipment		Read the safety label.
walkway	a marked route for people to walk		Keep the walkway clear.
sensor	a device that detects a condition or object		Check the sensor.

KNOWLEDGE CHECK - Concrete words

In pairs, cover the Word column. Point to each picture and name the item. Then, use the words to complete the sentences:

1. A ..... detects an object.
2. A ..... gives information on equipment.
3. A ..... protects people from moving parts.

4.2 Condition and record words

These words describe a condition or a decision. They will help you record the condition of an inspection item. Read the words and their meanings, then read the examples.

Word/chunk	Meaning	Example in a record
fitted	put correctly in place	Guard: fitted.
loose	not firmly fixed or secure	Cable: loose.
damaged	broken or not in good condition	Cable: damaged.
missing	Not there when it should be	Guard: missing.
clean	A clean machine part or work area has no dirt, dust, oil, or other material that could affect safe operation.	Sensor: clean.
obstructed	Blocked by something, such as tools, boxes, cables, or equipment	Walkway: obstructed.
pass	The expected condition is met	Emergency stop: Pass.
fail	The expected condition is not met	Cable: Fail.
report	tell the responsible person about a problem	Action required: report before use.

PAIR MEANING CHECK: Student A says one word. Student B says the meaning or gives a short record example. Change roles after five words.

KNOWLEDGE CHECK - Condition words

Choose from (loose • missing • clean • obstructed • fail):

1. The sensor has no dirt: ..... .
2. The guard is not there: ..... .
3. The route is blocked: ..... .
4. The cable is not secure: ..... .
5. The item does not meet the condition: ..... .

4.3 Sound Check - review only: read short record comments clearly

PAIR PRACTICE

Student A reads each comment aloud. Student B listens and identifies whether the comment gives a condition or an action.

Change roles.

Guard: loose.

Report before use.

Safety label: missing.

KNOWLEDGE CHECK - Pronunciation review:

Read the three comments again. Stress the important word and pause between the two parts. Then, read them to your partner.

5 Before You Read

PAIR PRACTICE

Look at the title and the table headings in the record below. What do you think a technician records here?

a. The condition of the equipment
b. The technician's work hours
c. The parts needed for repair

6 Reading

WORKPLACE Record

MODEL PRE-USE SAFETY CHECK RECORD - Training Rig MR-08.

Read the record below. Notice the short factual comments.

No.	Item	Condition comment	Status	Action required
1	Guard	Fitted and secure	PASS	-
2	Cable	Loose near panel	FAIL	Report before use.
3	Emergency stop	Accessible	PASS	-
4	Safety label	Readable	PASS	-
5	Walkway	Clear	PASS	-
6	Sensor	Clean	PASS	-
7	Required PPE	Safety glasses available	PASS	-
8	General visible condition	No obvious defect	PASS	-

Language in Context

Language element	Example from the record	What it helps the technician write
Short record style	Cable: loose. / Sensor: clean.	a fast, factual condition comment
be + adjective	The cable is loose.	a full sentence when more detail is needed
there is / there are	There is a visible defect.	that a problem exists
have/has	The panel has a readable label.	what equipment contains
status + action	FAIL - Report before use.	the decision and next action

7 Message Check

7.1 Read the model record again. Write T for True or F for False.

1. The guard is loose. ..... .
2. The cable is marked FAIL. ..... .
3. The emergency stop is accessible. ..... .
4. The walkway is obstructed. ..... .
5. The record gives an action note for the cable. ..... .

7.2 Match the item to the condition comment:

Item	Condition
1. Cable	a. No obvious defect.
2. Sensor	b. Loose near panel.
3. PPE	c. Clean.
4. General visible condition	d. Safety glasses available.

Answers: 1. ..... 2. .....
3. ..... 4. .....

7.3 Complete the record language with one word:

1. Action required: ..... before use.

2. Walkway: ..... .

3. Cable: ..... near panel.

4. Sensor: ..... .

5. Guard: fitted and ..... .

7.4 Read and answer the questions with a partner. Use short answers:

1. Which item is FAIL? ..... .

2. What action is required? ..... .

3. Why is "Cable: loose" better than "The cable looks bad"? ..... .

8 Think It Through

GROUP WORK: Work in groups of three. Read each comment. Decide: FACTUAL or VAGUE. If it is vague, rewrite it as a short factual record. Then, discuss the question below.

Comment	Factual / Vague	Better record if needed
The cable is kind of bad.	.....	.....
Guard: not fitted.	.....	.....
The sensor looks okay, I think.	.....	.....
Walkway: obstructed.	.....	.....

Discuss: Why should a technician avoid words such as (maybe, probably, and I think) in a condition record?

9 DID YOU KNOW?

Many modern maintenance systems keep a history for each asset. A work order or inspection record can show the asset, status, readings, date, and completed work. Clear, short comments help the next technician understand what happened and help the company track repeated problems over time.

Source: IBM Maximo / IBM Work Order Management guidance on asset maintenance history, inspections and work orders.

10 Build the Message - Language focus

In a pre-use record, every word should help the next person understand the condition. Notice each pattern, practise it, then complete the Knowledge Check.

10.1 Write a short condition comment: Item + condition

NOTICE IT

For a short inspection record, write the item, a colon (:), and the condition.

Pattern: Item: condition

Examples:

- Cable: loose.
- Sensor: clean.
- Guard: not fitted.

This is shorter than a full sentence but still clear.

PAIR PRACTICE

Look at Pictures A–D. For each picture, write the item's condition on the table below. Compare your answers with your partner.

A

Guard

B

Safety Label

C

Cable

D

Panel

SHORT INSPECTION RECORD:

No.	Item	Condition comment
1	.....	.....
2	.....	.....
3	.....	.....
4	.....	.....

KNOWLEDGE CHECK - Condition words

Rewrite as short record comments:

1. The cable is damaged. → .....

2. The sensor is clean. → .....

3. The guard is missing. → .....

10.2 Write a full factual sentence when you need more detail.

NOTICE IT

- Use is/are + condition: "The cable is loose."
- Use There is/are to point out a problem: "There is a visible defect."
- Use has/have to show what equipment contains: "The panel has a readable label."

KNOWLEDGE CHECK

Choose the correct word:

1. There is/are a loose cable.

2. The guards is/are fitted.

3. The panel have/has a label.

10.3 Mark the status: Pass or Fail

NOTICE IT

Mark PASS when the observed condition meets the checklist. Mark FAIL when it does not. Do not guess from appearance alone: use the condition information you are given.

KNOWLEDGE CHECK

Write Pass or Fail:

1. Expected: cable secure. Observation: cable loose. .....

2. Expected: sensor clean. Observation: sensor clean. .....

3. Expected: guard fitted. Observation: guard missing. .....

10.4 Add an action-required note

NOTICE IT

- If a failed item prevents normal use, write a short action note.
  Use a base verb:
  - "Report before use."
  - "Do not start."
  - "Report to the supervisor."
- Keep the action clear and short.

PAIR PRACTICE

Student A reads a failed condition. Student B writes one action note. Check: Is the action clear? Is it short?

KNOWLEDGE CHECK

Choose the best action note for a loose cable:

a. Maybe look later.

b. Report before use.

c. Cable missing.

11 Your Shift Challenge

WRITE THE PRE-USE RECORD: You are the trainee recorder for Training Rig MR-08. Use the eight photo/observation cards and the Pre-use Decision Reference below. For each item, write the observed condition and compare it with the expected condition. In this record, use Pass or Fail only. If the expected condition is not met, mark Fail and write the approved action from the reference. Complete all eight rows. Then compare your record with a partner.

Use only the information provided. Do not guess, change, or invent a technical action.

NOT FITTED
1. GUARD
Guard not fitted.

CHECK CABLE
2. CABLE
Cable loose near the panel.

PRESENT
3. EMERGENCY STOP
Emergency stop present and accessible.

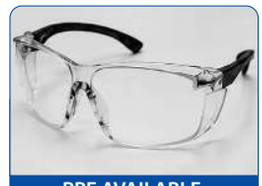

READABLE
4. LABEL
Label present and readable.

OBSTRUCTED?
5. WALKWAY
Walkway obstructed by materials.

DIRTY / CONTAMINATED
6. SENSOR
Sensor face dirty.

PPE AVAILABLE
7. PPE
Safety glasses available.

Visible Condition
8. GENERAL CONDITION
No obvious visible defect.

PRE-USE DECISION REFERENCE – MR-08

Use this reference to decide Pass or Fail and to record the approved action when the expected condition is not met.

Item	Expected condition	If the condition is not met – approved action
Guard	Fitted, present, and secure	Do not use. Report the missing or loose guard.
Cable	Secure; no visible damage	Report a loose or damaged cable before use.

Item	Expected condition	If the condition is not met – approved action
Emergency stop	Fitted, present, and accessible	Do not start. Report immediately.
Safety label	Present and readable	Report a missing or unreadable label.
Walkway / access route	Clear; not obstructed	Keep the route clear. Report if you cannot correct it safely.
Sensor face	Clean; not obstructed	Clean only if authorised; otherwise report.
Required PPE	Available for the task	Do not start without required PPE. Report.
General visible condition	No obvious defect	Stop and report any visible defect before use.

Complete your record:

No.	Item	Condition comment	Pass	Fail	Action required if fail
1	Guard		☐	☐	
2	Power/ Control Cable		☐	☐	
3	Emergency Stop		☐	☐	
4	Safety Label		☐	☐	
5	Access Route/ Walkway		☐	☐	
6	Sensor Face		☐	☐	
7	Required PPE		☐	☐	
8	General Visible Condition		☐	☐	

PAIR CHECK - Exchange records

Use the observation cards and Pre-use Decision Reference to check your partner's record.

- Is the condition comment factual?
- Does the Pass/Fail decision match the expected condition?
- Does every failed item use the correct action from the reference?
- Has any information been added, changed, or guessed?

Your Communication Toolkit

Communicative move	Useful chunks / sentence frames
Write the item condition	Guard: fitted. / Cable: loose. / Sensor: clean.
State a missing item	Guard: missing. / Label: missing.
Point out a problem	There is a visible defect. / The cable is damaged.
Mark the result	Pass. / Fail.
Record the supplied action	Action required: report before use. / Do not start. / Report it.
Peer-check a record	Is the comment factual? / Is the status correct? / Is the action from the reference?

Remember

- Use the approved action in the Pre-use Decision Reference. The Toolkit helps you write the action clearly; it does not ask you to choose or invent a technical action.

SUCCESS EVIDENCE

You are successful when you:

- write a factual condition from the observation card;
- compare it with the correct expected condition;
- mark the correct Pass/Fail status;
- use the approved action from the reference when an item fails;
- complete all eight rows;
- do not add, change, or guess technical information; and
- keep the record short and clear.

12 Now I Can!

☐ I can write a short condition comment for a checklist item.
☐ I can use clear words such as fitted, loose, damaged, missing, clean and obstructed.
☐ I can mark Pass or Fail from the information I am given.
☐ I can write a short action-required note for a failed item.
☐ I can check a partner's record for clear and factual English.

13 Look Back, Level Up

1. Which short comment was easiest for you to write?

2. Which condition word was hardest to spell?

3. How did the Pass/Fail decision change your action note?

4. Which vague word will you avoid in a real record?

14 Before You Clock Out

STUDENT PROMPT

Observation: The cable is loose. Write:

1. one short condition comment .....
2. Pass or Fail .....
3. one action-required note .....

15 Job-Site Word Bank

English word/chunk	English meaning	Arabic equivalent	See It on the Job
guard	protective cover/barrier	واقٍ / حاجز حماية	Guard: fitted.
cable	wire carrying power or signals	كابل	Cable: loose.
emergency stop	control that stops a machine quickly	زر التوقف الطارئ	Emergency stop: Pass.
label	information fixed to equipment	ملصق / بطاقة بيانات	Label: readable.
walkway	marked route for people	ممر مشاة	Walkway: clear.
sensor	device that detects a condition/object	حساس / مستشعر	Sensor: clean
fitted	put correctly in place	مُثبّت / مُركّب	Guard: fitted.
loose	not firmly fixed	غير مُحكم / مرتخٍ	Cable: loose.
damaged	broken / not in good condition	تالف / متضرر	Cable: damaged.
missing	not there	مفقود / غير موجود	Guard: missing.
clean	not dirty	نظيف	Sensor: clean.
obstructed	blocked	مُعاق / مسدود	Walkway: obstructed.
pass	expected condition is met	اجتاز / مقبول	Emergency stop: Pass.
fail	expected condition is not met	غير مجتاز / غير مقبول	Cable: Fail.
report	tell the responsible person	يُبلّغ	Report before use.

9 LESSON

READY FOR THE WORKSHOP? THE SAFETY COMMUNICATION CHALLENGE

REVISION

A. WORD POWER + LANGUAGE REPAIR: Vocabulary and grammar revision

A1. Match the workshop word with its meaning:

Work alone first. Write the letter. Then, compare with a partner.

Word/phrase	Letter	Meaning
1. guard	.....	**a.** a route for people to walk safely
2. cable	.....	**b.** a device that detects an object or condition
3. terminal	.....	**c.** a panel with switches, buttons or indicators
4. sensor	.....	**d.** a protective cover around a dangerous part
5. safety label	.....	**e.** a point where an electrical connection is made
6. emergency stop	.....	**f.** a message fixed to equipment
7. walkway	.....	**g.** a wire that carries power or signals
8. control panel	.....	**h.** a control used to stop a machine quickly

A2. Match the communication phrase with its purpose:

Phrase	Purpose
1. Keep clear.	..... a. state required PPE
2. Could you repeat that, please?	..... b. state the next action after a failed check
3. Do you mean terminal 30?	.....c. show that the information is correct
4. Confirmed: 24 volts.	.....d. tell someone to stay away
5. Action required: report before use.	.....e. ask someone to say it again
6. Safety glasses required.	.....f. ask if one detail is correct

A3. Complete with a condition word; you are not going to use all the words:

WORD BOX:

secure • loose • missing • damaged • clean • obstructed • readable • clear

Sentence
1. The cable is not fixed tightly. It is ..... .
2. The guard is not there. It is ..... .
3. The safety label is easy to read. It is ..... .
4. Materials are blocking the walkway. It is ..... .
5. The sensor face has no dirt. It is ..... .
6. The emergency-stop cover is broken. It is ..... .

A LANGUAGE REPAIR: Grammar and workplace sentence revision

A4. Find the mistake and write the sentence correctly:

1. You must to wear safety glasses.

.....

2. Do not to touch the guard.

.....

3. There are a loose cable near the panel.

.....

4. The panel have a readable label.

.....

5. First, check the label. Finally, inspect the guard. Next, record the result.

.....

6. Could you repeats the terminal number, please?

.....

A5. Rewrite as a short inspection-record comment. (Remember - Item: Condition)

1. The guard is not fitted. → .....
2. The cable is loose. → .....
3. The sensor is clean. → .....
4. The label cannot be read. → .....
5. The walkway is blocked. → .....

A6. Choose the best workplace expression.

1. You did not hear the code.

a. Guess it.

b. Could you repeat the code, please?

2. A guard is missing.

a. Do not start. Report it.

b. It is probably fine.

3. You want to check a number

a. Is that terminal 13?

b. Terminal maybe 13

4. The cable is loose

a. PASS

b. FAIL

5. You finished the read-back. What do you say?

a. Is that correct?

b. Never mind.

PAIR CHECK

Compare A4-A6 with a partner.

Explain one correction using simple English: "Use must + base verb," "Use there is," or "Do not guess."

B READING CHALLENGE: Signs, labels and equipment information

B1. Look at the four signs. Match each sign to the safest action.

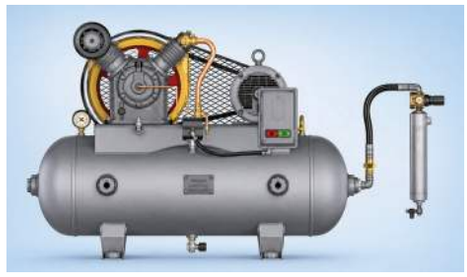

A. HIGH VOLTAGE

B. ROTATING PARTS

C. HOT SURFACE

D. COMPRESSED AIR

Actions:

1. Wear eye protection. (.....)
2. Keep away from moving parts. (.....)
3. Keep away from live electrical parts. (.....)
4. Do not touch the hot part. (.....)

B2. Read the equipment information card. Answer the questions that follow:

EQUIPMENT INFORMATION - TRAINING RIG TR-250	
Model	TR-250
Serial number	6K-418
Input	24 V DC
Location	Workshop Bay 4 - Panel C
Safe use note	Guard must be fitted before operation. Report any unreadable label before use.

1. What voltage is shown? .....
2. What safety problem would stop normal use of the rig? .....
3. Where is the equipment placed? .....
4. What must be checked before the machine is used? .....
5. What should you do if the label cannot be read? .....

C LISTENING CHALLENGE: A new routine equipment check

LISTEN TWICE

First listening: choose the main purpose.

Second listening: complete the detail card.

The dialogue is new, but all language comes from Lessons 1-8.

C1. First listening. What is the main purpose?

a. order a new machine

b. check and record critical equipment details

c. discuss a lunch break

Answer: .....

C2. Second listening. Complete the detail card:

Critical detail	What you hear
Model	.....
Terminal	.....
Sensor gap	.....
Voltage	.....
Location	.....
Stop/report condition	.....

C3. Short answer:

Why does Technician B ask for the terminal number again?

.....

.....

PAIR CHECK

Compare your detail card with a partner. If one answer is different, say:
"Is that ___?" or "Do you mean ___?"

D DIALOGUE COMPLETION + SENTENCE REPAIR: Use familiar language chunks

D1. Complete the dialogue with phrases from the phrase box. Use each phrase once:

PHRASE BOX

- Could you repeat the model number slowly?
- Do you mean TR-250 or TR-250A?
- Is that correct?
- Confirmed
- Where should I record it?

Supervisor	The machine label says TR-250, but the paper beside it says TR-250A.
Trainee	1. .....
Supervisor	TR-250 on the machine. TR-250A on the paper.
Trainee	2. .....
Supervisor	Yes. They are different. Do not guess which paper is correct.

Trainee	I will report the difference before use. 3. .....
Supervisor	On the inspection record at Panel C.
Trainee	TR-250 on the machine; TR-250A on the paper; report before use. 4. .....
Supervisor	Yes, that is correct.
Trainee	5. .....

D2. Rewrite the sentences so they are clear and correct for work. Follow the instructions in column B:

Sentence	What to do
1. Maybe you cannot touch it.	Use a direct prohibition.
2. The cable look loose.	Correct the grammar.
3. There are a missing guard.	Correct there is/are.
4. The sensor have dirt.	Correct have/has.
5. I think terminal 13 maybe.	Ask a clarification question instead of guessing.
6. The cable is loose so PASS.	Correct the status decision.

Write your corrected sentences:

.....

.....

.....

.....

.....

.....

E SPEAKING STATIONS: Pair work: clarification, read-back and warnings

HOW TO WORK: Work in pairs. Spend about 8 minutes at each station. Student A starts. Then change roles. Use keyword notes only - do not write a full script.

Station 1 - Clarify and read back:

Student A - give the message	Student B - what you must do
"Check terminal 30 on the right side of Panel D. The reading is 24 volts."	Ask one clarification question. Read back terminal + location + voltage. Finish with "Is that correct?"

Student A - give the message	Student B - what you must do
Then change roles. Use: terminal 13, left side of Panel B, 3.0 millimetres.	

Station 2 - Give an immediate warning:

Situation	Your warning must include
A cable is across the walkway.	attention + hazard + safe action
The machine guard is missing.	attention + prohibition + report action
There is a spill near the control panel.	attention + location + keep-clear action

Station 3 - Put a safety message in order:

CARD

safety glasses • check the label • terminal 14 • inspect the guard • record the result • if the guard is missing: stop and report

Student A: give a short, ordered briefing using First / Next / Then / Finally.

Student B: listen and give a short read-back.

Speaking success check:

Check	Yes	Not yet
I ask for clarification instead of guessing.	☐	☐
I read back the critical number/location accurately.	☐	☐
I use clear warning language: Stop / Do not / Keep clear / must.	☐	☐
Important numbers and action words are easy to hear.	☐	☐

F WRITING CHALLENGE: Complete a short pre-use record

SCENARIO

You are checking Training Rig TR-250 before use. Read the observations. Complete the record using short factual English. Mark Pass or Fail. Add an action note for each failed item.

F1. Read the observations:

1. Guard: fitted and secure.
2. Cable: loose near Panel C.
3. Emergency stop: present and accessible.
4. Safety label: present but unreadable.
5. Walkway: clear.
6. Sensor: clean.
7. Safety glasses: available.
8. General condition: no obvious visible defect.

F2. Complete the record:

Item	Condition comment	Pass	Fail	Action required (if fail)
Guard	.....	☐	☐	.....
Cable	.....	☐	☐	.....
Emergency stop	.....	☐	☐	.....
Safety label	.....	☐	☐	.....
Walkway	.....	☐	☐	.....
Sensor	.....	☐	☐	.....
PPE available	.....	☐	☐	.....
No obvious defect	.....	☐	☐	.....

F3. Rewrite two full sentences as short record comments:

1. The cable is loose near Panel C. → .....
2. The safety label cannot be read. → .....

PAIR REVIEW

Exchange records. Check only three things:

1. factual condition
2. correct Pass/Fail
3. clear action note for a failed item

G FINAL UNIT CHECK: What can you do now?

Check what you can do now. Read each area and tick "Ready" or "Practise again":

Area	My evidence	Ready	Practise again
Vocabulary/language	I matched key words and corrected familiar grammar.	☐	☐
Reading	I understood signs, labels and an equipment card.	☐	☐
Listening	I recorded critical numbers, units and locations accurately.	☐	☐
Speaking	I clarified, read back, and warned clearly.	☐	☐
Writing	I completed a short pre-use record accurately.	☐	☐

My two strongest skills:

One skill I will practise again:

Module 1 COMPLETE

You have revised the English needed to understand, clarify, warn, confirm and record familiar safety information before and during routine Mechatronics workshop activity.
