UNIT 1 - Occupational Health, Safety and Environment

2.1 FROM NATIONAL LAW TO WORKPLACE REQUIREMENTS

ENG – Nada Ahmed Ali Attia

Date/ 6/10/2026

Academic Year: 2026/2027
Semester : One

OBJECTIVES

BY THE END OF THIS LESSON, YOU WILL BE ABLE TO:

Understand the Legal Basis of Safety

Differentiate the Levels of Legislation

Trace the Chain "From Law to Action"

Warm up

SCENARIO: WHO SHOULD ACT?

You are preparing to assist with a workshop task. A new worker has been assigned to use a machine. The worker has received a general site induction, but has not received the specific hazards associated with the task. The supervisor knows that the worker has not completed the required training.

Discuss with a partner:

1. Should the worker begin the task simply because production needs to continue?
2. Who has responsibility for organizing and supervising the work?
3. What information should the worker receive before carrying out the task?
4. What should the worker do if they are unsure how to perform the task safely?
5. What could happen if the required safety arrangements are ignored?

Levels of National Requirements

The Hierarchy of Safety Legislation

1. Primary Legislation

2. Implementing Regulations & Decrees

3. Secondary Legislation

Levels of National Requirements

1. Primary Legislation:

- Acts passed by the national parliament.

- Establishes broad legal principles and duties.

2. Implementing Regulations & Decrees:

- Government regulations that translate broad principles into technical requirements.

Levels of National Requirements

3. Secondary Legislation:

- Ministerial decrees and administrative orders providing specific day-to-day requirements.

Levels of National Requirements

Key Definitions:

- Legislation:** The body of laws governing activities within a jurisdiction.

- Primary Law:** Enacted laws establishing main legal requirements.

- Implementing Requirement:** Regulations detailing how to put law into practice.

FROM LAW TO ACTION

•The Sequential Chain:

- 1- National Law

2- Implementing Regulations & Requirements

•3- Workplace Safety Arrangements

4- Safe Procedures & Instructions

•5- Safe Work (Daily Practice)

FROM LAW TO ACTION

How Laws Become Safe Workplace Actions

•Technician's Role:
Technicians directly interact with the final steps (procedures, instructions, and controls), which are fully backed by national legislation.

CONCLUSION

FROM LAW TO ACTION

National Law

Implementing Regulations

Workplace Safety Arrangements

Safe Procedures

Safe Work

LEVELS OF NATIONAL OSH REQUIREMENTS

PRIMARY LEGISLATION

(Primary Law)

Acts established by Parliament

IMPLEMENTING REGULATIONS & DECREES

Turns broad principles into specific requirements

SECONDARY LEGISLATION

(Minor requirements)

Ministerial Decrees, Administrative Orders

Implementing Regulations

Workplace Safety Arrangements

DEFINITIONS:

- **LEGISLATION:** acts established by Parliament and ritatemend government.
- **PRIMARY LAW:** acts establishment entctied by by Parliament as legislation and law.
- **IMPLEMENTING REQUIREMENT:** Turns broad principles remainining in principle, into specific actionnated requirements.

UNIT 1 - Occupational Health, Safety and Environment

2.2 Who is responsible for workplace safety?

ENG – Nada Ahmed

Date/ 6/10/2026

Academic Year: 2026/2027
Semester : One

Lesson Objectives

By the end of this lesson, you will be able to:

1. Identify the people and services responsible for workplace safety.

2. Explain the main function of the employer, manager, supervisor, worker's safety representative, Head of Prevention and Protection Service, and Occupational Health Doctor.

3. Distinguish between organising work, supervising work, representing workers, and providing specialist health and safety support.

4. Apply the responsibility chain to a reported unsafe condition.

Warm up

Who is responsible for workplace safety?

- 1) The Employer
- 2) The Manager
- 3) The Supervisor
- 4) TECHNICIANS

Warm up

Main Concept

Safe work relies on clearly defined responsibilities shared across multiple roles.

A safety system does not place every burden on one person; it combines operational oversight, worker representation, and specialist support.

The Employer

Holds overall legal responsibility for safety.

Non-delegable duties:
1- Conducting/documenting the Risk Assessment
2- appointing the Head of the Prevention and Protection Service

The Manager

**Translates requirements into practice by
planning, providing resources, and organizing
work**

The Supervisor

Oversees day-to-day work execution and ensures safety instructions are strictly followed.

Key contact for technicians/learners when instructions are unclear or unsafe conditions are noticed.

Specialist Support & Worker Representation

Workers' Safety Representative (RLS):

Represents workers' health and safety concerns and participates in risk assessment consultations (distinct from the Supervisor).

Prevention & Protection Service (RSPP/SPP):

Coordinates prevention/protection measures, provides technical expertise, and supports risk management.

Occupational Health Doctor

Conducts **Health Surveillance** (medical exams/tests) to monitor worker fitness relative to occupational risks.

Summary

Putting the roles together

Each role answers a different safety question.

Role	Main function	Safety question answered
Employer	Holds overall responsibility and ensures risk assessment and prevention systems are established.	Is the safety system in place?
Manager	Organises and supervises work according to the employer's requirements.	Is the work organized correctly?
Supervisor	Oversees how work is actually carried out.	Is the safe method being followed?
Worker's Safety Representative	Represents workers on occupational health and safety matters.	Are worker concerns represented?
Head of Prevention and Protection Service	Coordinates prevention and protection activities and provides expertise.	Is professional safety support available?
Occupational Health Doctor	Supports occupational-health examinations, surveillance, and advice.	Are health effects and fitness monitored?

Homework & Class Exercises

Part A: Multiple Choice Questions

Which two responsibilities of the Employer cannot be delegated to anyone else?

- A) Conducting the risk assessment and appointing the Head of Prevention
- B) Supervising daily work and buying safety equipment
- C) Conducting health examinations and representing workers

What is the main role of the Supervisor (*Preposto*)?

- A) To carry out medical examinations on workers
- B) To oversee the correct execution of work and ensure instructions are followed
- C) To represent worker interests during safety meetings

How does the Workers' Safety Representative (RLS) differ from a Supervisor?

- A) The RLS gives direct work instructions to technicians
- B) The RLS oversees daily production speed
- C) The RLS represents worker safety concerns, while the Supervisor oversees work execution

Who performs Health Surveillance in the company?

- A) The Manager
- B) The Occupational Health Doctor
- C) The Head of the Prevention Service

Homework & Class Exercises

MATCH

Role

- 1. Employer**
- 2. Manager**
- 3. Supervisor**
- 4. Workers' Safety Rep.**
- 5. Prevention Service (RSPP)**
- 6. Occupational Doctor**

Function

- A.** Represents workers on health and safety matters
- B.** Oversees day-to-day execution of work tasks
- C.** Holds overall legal responsibility for the workplace safety system
- D.** Conducts medical tests to check worker fitness
- E.** Organizes and plans work activities using professional authority
- F.** Coordinates technical prevention and risk management

UNIT 1 - Occupational Health, Safety and Environment

2.3 INFORMATION, TRAINING AND REPORTING

ENG – Nada Ahmed Ali

Date/ 6/10/2026

Academic Year: 2026/2027
Semester : One

OBJECTIVES

BY THE END OF THIS LESSON, YOU WILL BE ABLE TO:

Differentiate Information, Training, and Specific Training

Execute Worker/Employee Responsibilities

Understand Reporting & Occupational Disease

Categorize Safety Communications

The Three Levels of Safety Preparation

Information (What do I need to know?):

General health & safety risks, emergency contacts, designated personnel, chemical hazards, and existing control measures.

Training (What do I need to understand?):

Foundational concepts of risk/harm, legal rights & duties, and workplace prevention systems.

Specific Training (What do I need to be authorized to do?):

Practical instruction for high-risk equipment, machinery operation, manual handling, PPE selection, and hazardous chemical handling.

Safety Principle: *General safety information does not authorize you to perform a specialist task.*

WORKER / EMPLOYEE RESPONSIBILITIES

SUBTOPIC 2.3 — TECHNICIAN RESPONSIBILITIES IN PRACTICE

FOLLOW AUTHORIZED INSTRUCTIONS

PROCEDURES

Understand and strictly follow official instructions.

USE PPE CORRECTLY

EQUIPMENT

Wear required protective gear according to instructions.

REPORT HAZARDS AND DEFECTS

NOTIFY

Report unsafe conditions, hazards, and broken tools.

COOPERATE WITH SAFETY ARRANGEMENTS

TEAMWORK

Work with the safety team and follow procedures.

WORK WITHIN COMPETENCE AND AUTHORITY

COMPETENCE

Do not carry out tasks outside your training.

ATTEND REQUIRED TRAINING

LEARN

Complete all required information and training.

REPORTING ACCIDENTS & OCCUPATIONAL DISEASE

SUBTOPIC 2.3 – REPORTING ACCIDENTS & OCCUPATIONAL DISEASES

FORMAL REPORTING & LEGAL REQUIREMENTS

KEY DEFINITIONS & CONCEPTS

OCCUPATIONAL HARM:

- Includes sudden workplace accidents and long-term illnesses.

OCCUPATIONAL DISEASE:

- An illness caused by repeated exposure to harmful workplace conditions.

FORMAL NOTIFICATION TIMELINES (EXAMPLE FRAMEWORK)

INCAPACITY > 3 DAYS

REPORT TO NATIONAL
INSURANCE WITHIN
48 HOURS.

FATAL ACCIDENTS

REPORT WITHIN
24 HOURS.

DIAGNOSED OCCUPATIONAL DISEASE

REPORT WITHIN **5
WORKING DAYS** OF
MEDICAL CERTIFICATION.

TAKEAWAY:

REPORTING IS A LEGAL OBLIGATION, NOT AN INFORMAL CHOICE.

Homework & Class Exercises

Classify each statement into its correct category:

You are given the phone number and name of the Occupational Health Doctor.

[Information / Training / Specific Training]

You participate in a workshop module explaining how risk assessment connects to safety laws. **[Information / Training / Specific Training]**

You receive practical hands-on instruction and pass a competence test to operate a CNC milling machine. **[Information / Training / Specific Training]**

You are provided with a list of emergency evacuation routes for your building.

[Information / Training / Specific Training]

You complete a certified course on rope-access systems and fall-arrest gear.

[Information / Training / Specific Training]

UNIT 1 - Occupational Health, Safety and Environment

2.4 WHEN A SAFETY REQUIREMENT IS NOT MET

ENG – Nada Ahmed Ali

Date/ 6/10/2026

Academic Year: 2026/2027

Semester : One

OBJECTIVES

BY THE END OF THIS LESSON, YOU WILL BE ABLE TO:

When a safety requirement is not met ?

WARM-UP –What do you see?

Non-compliance

is when an applicable requirement, instruction or authorized safety arrangement is not being followed.

Why non-compliance occurs

1. Required information has not been provided.

2. A known unsafe condition has not been corrected

3. An authorized safe-working instruction is not being followed.

4. Required training has not been completed

5. A required safety responsibility has not been carried out.

Why non-compliance matters

Corrective action

Improvement action

Definition	Corrective action is taken to eliminate or control an unacceptable condition	Improvement action reduces risk further when an existing arrangement is already considered acceptable.
Example	A required safety arrangement has not been provided before work begins. The issue must be corrected before the work is allowed to continue under the approved process.	Installing automated remote-controlled hooks on fully functional ladle cranes to eliminate operator proximity to molten steel.
Difference	Deals with something that is not acceptable	Makes an already controlled situation better

Types of Safety Action

ORGANIZATIONAL

These concern how work is organized.

Examples include:

- information
- training
- health surveillance

PROCEDURAL

These concern how a task should be performed.

Related to human

Example:

An authorized safe-work instruction.

TECHNICAL

These involve engineering measures used to control a hazard.

Related to tools and machines

Example:

Isolate equipment or cut off fuel and power supplies during high-temperature spike.

Summary

1. What is the non-compliance?

when an applicable requirement, instruction or authorized safety arrangement is not being followed.

2. Why does non-compliance occur?

1. required information has not been provided.
2. required training has not been completed.
3. a known unsafe condition has not been corrected.
4. an authorized safe-working instruction is not being followed.
5. a required safety responsibility has not been carried out.

3. Why does non-compliance matter?

- temporary injury
 - permanent disability
 - death
 - pain and loss for workers and families
 - lost productivity
 - healthcare costs
 - regulatory penalties
-

4. Different between corrective and improvement action

Corrective action deals with something that is not acceptable.
Improvement action makes an already controlled situation better.

5. Types of Safety Action

1. Organizational: **concern how work is organized.**
2. Procedural: **Related to human**
3. Technical: **Related to tools or machines**

HOMEWORK

1. The Industrial example in student book
page 37

2. Search more about this safety critical
concept. page 38

Safety Critical - RESPONSIBILITY DOES NOT MEAN ACTING OUTSIDE YOUR AUTHORITY

Finding a non-compliance does not automatically authorize you to correct equipment, change a workplace system or make a legal decision.
