

QUESTION BANK

Unit 1 – Occupational Health, Safety and Environment

Lessons 1, 2 and 3

Question types included: True/False • Definitions • Written answers • Comparison • Scenarios (Hazard / Exposure / Harm / Incident / Accident)

Instructions: Answer all questions in complete sentences where required. For scenario questions, always separate Hazard → Exposure → Harm. Distinguish Incident from Accident carefully.

LESSON 1 – Foundations of Occupational Health and Safety

A. True or False

Write True or False. If False, correct the statement.

1. A hazard is the injury that happens to a worker.
.....
2. Every incident results in an injury or ill health.
.....
3. The same hazard can remain while the level of risk changes.
.....
4. An accident is an unplanned event that may or may not cause harm.
.....
5. Exposure describes how a person comes into contact with a hazard.
.....
6. Prevention should begin only after an accident has occurred.
.....
7. Occupational health includes physical, mental and social well-being.
.....
8. If no accident has happened yet, the workplace is automatically safe and healthy.
.....

B. Definitions

Write a clear, accurate definition for each term.

9. Hazard
.....
.....

10. Exposure
.....
.....

11. Harm
.....
.....

12. Risk
.....
.....

13. Incident
.....
.....

14. Accident

.....

.....

15. Prevention

.....

.....

C. Written Answers

16. Explain why the absence of an accident does not automatically mean that a workplace is healthy and safe.

.....

.....

17. What is the main difference between an Incident and an Accident?

.....

.....

18. Why must prevention begin before work starts?

.....

.....

19. List the three ideas you must separate when describing a workplace condition: Hazard, Exposure and Harm. Explain what each one answers.

.....

.....

.....

D. Comparison

20. Compare Hazard and Risk. Use a short table or clear paragraphs to show the difference.

.....

.....

.....

21. Compare Incident and Accident with one industrial example for each.

.....

.....

.....

E. Scenarios – Identify Hazard, Exposure, Harm, Incident or Accident

Scenario 1

In a sheet-metal workshop, a sharp edge of a metal sheet was projecting into a walking route. A worker walked past, touched the edge with his hand, suffered a deep cut and needed stitches.

22. Identify: (a) Hazard (b) Exposure (c) Harm (d) Is this an Incident or an Accident? Why?

.....

.....

.....

Scenario 2

Oil was spilled on the floor in a work area. A worker walked across, slipped, but managed to regain balance and did not fall or suffer any injury.

23. Identify: (a) Hazard (b) Exposure (c) Harm (if any) (d) Incident or Accident? Why?

.....

.....

.....

Scenario 3

A worker used an unsecured ladder to work at height. The ladder shifted, the worker fell from about 2 metres and broke his arm.

24. Identify: (a) Hazard (b) Exposure (c) Harm (d) Incident or Accident? Why?

.....

.....

.....

Scenario 4 – Same Hazard, Different Risk

An industrial solvent is considered under two conditions. Condition A: closed container, stored in a controlled ventilated location. Condition B: open container, used in a poorly ventilated area with no controls.

25. (a) Is the chemical hazard different between A and B? (b) What has changed? (c) In which situation is exposure more likely? (d) In which situation is the risk greater? (e) Suggest one preventive action.

.....

.....

.....

Scenario 5

A corrosive chemical is stored on a high shelf. A worker reaches up, the container slips, liquid splashes onto the worker's arm and causes a chemical burn.

26. Identify: (a) Hazard (b) Exposure (c) Harm (d) Incident or Accident?

.....

.....

.....

LESSON 2 – National Safety Legislation and Workplace Responsibilities

A. True or False

Write True or False. If False, correct the statement.

27. Being a learner or student means you do not need to follow workplace safety requirements.

.....

28. The employer can fully delegate the workplace risk assessment to any manager.

.....

29. The supervisor represents workers' interests on health and safety matters.

.....

30. Occupational insurance systems may cover occupational diseases as well as sudden accidents.

.....

31. If you notice an unsafe condition, you should immediately take over the employer's responsibilities and correct it yourself.

.....

32. Specific training is the same as general information about workplace hazards.

.....

33. Non-compliance occurs when an applicable safety requirement or authorised instruction is not followed.

.....

B. Definitions

34. Primary legislation / Primary law

.....

.....

35. Implementing regulation or decree

.....

.....

36. Employer (in the occupational safety system)

37. Supervisor

38. Workers' Safety Representative

39. Occupational disease

40. Non-compliance

C. Written Answers

41. Explain the sequence from national law to safe work in the workplace.

42. Name two responsibilities of the employer that cannot be delegated (according to the national system described in the lesson).

43. What is the difference between Information, Training and Specific training? Give one example of each.

44. Why must reporting of accidents and occupational diseases follow formal authorised routes?

D. Comparison

45. Compare the roles of the Supervisor and the Workers' Safety Representative.

46. Compare the roles of the Employer and the Manager in the safety system.

47. Compare a workplace accident and an occupational disease.

E. Scenarios

Scenario 6

A new worker has received only a general site induction. The supervisor assigns him to operate a machine for which he has not received specific training. Production pressure is high.

48. (a) Should the worker begin the task? Why / why not? (b) Who has responsibility for organising safe work here? (c) What type of preparation is missing (Information / Training / Specific training)? (d) What should the worker do?

.....

.....

.....

Scenario 7

A technician notices a known unsafe condition that has not been corrected for several days. The authorised safe-working instruction is not being followed by some workers.

49. (a) Is this non-compliance? Explain. (b) What is the technician's correct action regarding authority? (c) Who should the technician report to first?

.....

.....

.....

Scenario 8

A worker develops an illness that the occupational-health doctor links to repeated exposure to a harmful substance at work. A colleague says: "Insurance only covers sudden accidents, not long-term illness."

50. (a) Is the colleague correct? Why / why not? (b) What is the correct term for this type of work-related illness?

.....

.....

LESSON 3 – European Directives and Technical Safety Standards

A. True or False

Write True or False. If False, correct the statement.

51. Product markings and technical information on machinery are only decorative.

.....

52. The CE marking alone guarantees that a machine is safe for every possible task.

.....

53. A technician is expected to recognise important safety information and report anything missing, unclear or inconsistent.

.....

54. Partly completed machinery is treated exactly the same as a complete machine ready for independent use.

.....

55. An Ex marking means the equipment is explosion-proof in every situation without further checks.

.....

56. If the model number on the operating instructions is different from the model number on the machine, you should ignore the difference.

.....

57. The Machinery Directive applies to machinery that has a drive system other than direct human or animal effort.

.....

B. Definitions

58. CE marking

.....

.....

59. European Directive (in the context of product safety)

.....

.....

60. Partly completed machinery

.....

.....

61. Declaration of Conformity

.....

.....

62. Ex marking (ATEX context)

.....

.....

63. Technical standard (in relation to product safety)

.....

.....

C. Written Answers

64. List at least four types of information you may find on industrial machinery or equipment that help you work safely.

.....

.....

65. Why is it important that the model number on the operating instructions matches the model number on the machine?

.....

.....

66. What should a technician do if safety markings, labels or instructions are missing, unclear or inconsistent?

.....

.....

67. Explain the difference between a Declaration of Conformity and a Declaration of Incorporation.

.....

.....

D. Comparison

68. Compare a complete machine and partly completed machinery. How do their accompanying documents differ?

.....

.....

69. Compare the meaning of the CE marking and the Ex marking. What does each one tell you, and what does each one not automatically guarantee?

.....

.....

E. Scenarios

Scenario 9

You are preparing to work near an industrial machine. On the machine you can see: manufacturer's name, model number, serial number, CE marking, electrical rating information and a warning symbol. A set of operating instructions is available, but the model number printed on the document is slightly different from the model number on the machine.

70. (a) What information would you check first? (b) What does the CE marking tell you? (c) Does the CE marking alone tell you the machine is safe for every task? (d) Why is the model-number difference important? (e) Should you assume the instructions are suitable?

.....

.....

.....

Scenario 10

A component (servo valve / hydraulic power unit) is delivered with a Declaration of Incorporation and assembly instructions. A colleague says: "It has CE-related paperwork, so we can use it as a stand-alone machine."

71. (a) Is the colleague correct? Why / why not? (b) What type of equipment is this likely to be? (c) What documents should accompany it?

.....

.....

.....

Scenario 11

Equipment in a potential explosive-atmosphere area carries both a CE marking and an Ex marking. A worker says: "The Ex mark means it is explosion-proof everywhere – we do not need any further checks."

72. (a) Is the worker correct? (b) What must still be followed even when an Ex marking is present? (c) What should you do if you are unsure about the suitability of the equipment for the zone?

.....

.....

.....

End of Question Bank

Total questions: 72 | Lessons 1, 2 and 3 | Suitable for homework, revision, formative checks and exam practice.

Teachers may select questions by type or by lesson according to the lesson sequence and assessment needs.
